WASHINGTON.

MARCH, 1902.

COURSE OF WHOLESALE PRICES, 1890 TO 1901.

In order to meet the constant and growing demand for statistics of prices, the Department undertook some months ago the collection of data relating to wholesale prices for the period from 1890 to 1901. The commodities covered were selected, not only with regard to their representative character, but with regard to their availability in the future in the continuation of the record which is begun here. It is expected that in the second or third number of the Bulletin in each succeeding year there will be given the quotations of actual prices for the preceding year and the record of relative prices for the entire period beginning with the year 1890.

Changes in the actual prices of single commodities may readily be seen by the inspection of a series of quotations covering a number of years, but in order to ascertain the changes in the general price level from year to year the quotations for a number of commodities of a more or less dissimilar character must be examined and in some manner combined. The method quite generally adopted for this purpose by statisticians and economists is the use of what is commonly known as the index number or relative price.

Before proceeding to the discussion of the data which enter into the present record, it seems desirable to define the index number or relative price, explain the various methods adopted in securing the same, and give a short history of the more important series of index numbers which have been constructed. Briefly, an index number or relative price of any given article at any given date is the percentage which the price of that article at that date is of the price of the same article at a date or a period which has been selected as a base or

standard. This base or standard varies in the different series of index numbers which have been presented to the public. In the London Economist's index numbers the average price for the years 1845 to 1850, inclusive, is taken as the base; in those calculated by Mr. Sauerbeck the average for the eleven years, 1867 to 1877, is taken; in Soetbeer's index numbers the average for the four years, 1847 to 1850, is used, while in the United States Senate Finance Committee's statement of relative prices (Senate Report No. 1394, 52d Congress, 2d session) the price for the year 1860 is taken as the base or standard. In order to secure the index number or relative price for any article at any date in the period covered, the price of the article for that date is divided by the price at the date or by the average price for the period selected as the base. The quotient obtained shows what per cent the price at the given date is of the base or standard price and is called the index number or relative price. For example, the percentage for flour in 1885 in Mr. Sauerbeck's series of index numbers is 63, meaning that the average price of flour in 1885 was 63 per cent of the average price of the same article during the base period (1867 to 1877). This base being always 100, a fall of 37 per cent is indicated.

These percentages having been made in the case of each separate article included in the particular scheme under consideration, and for each year of the period covered, a series of total index numbers or relative prices for each of the years covered is usually constructed by adding together the index numbers of all the articles for each year and dividing the result by the number of articles considered, thus securing an average of the same. This course has been followed by Sauerbeck, Soetbeer, the United States Senate Finance Committee, and some others. In the case of the London Economist index numbers, however, simply the sum of the index numbers of the individual articles is used; for example, the total of the index numbers for the base period (1845 to 1850) is 2,200, or the sum of the base figures (100) for the 22 articles considered, and the total of the percentages for 1873 is 2,947. These sums, however, may be readily reduced to the average form given in other series of index numbers by dividing each by 22, the number of articles considered. It will be seen then that the index numbers or relative prices for all the commodities combined do not represent averages of the actual prices of such dissimilar commodities as a loaf of bread, a pound of meat, a ton of pig iron, etc., but are averages of the index numbers or relative prices of the articles.

In order that a more complete understanding may be had of the further details of the principal price indexes of the world, those of the London Economist, Palgrave, Sauerbeck, Soetbeer, the United States Senate Finance Committee, Commons, and Dun are considered separately.

LONDON ECONOMIST INDEX NUMBER.

The following statement relative to the history of these well-known index numbers is given in the report of the United States Senate Finance Committee on Wholesale Prices, Wages, and Transportation:

The best-known price series and calculations of relative prices are those of the Economist. This journal publishes each week a list of "trade prices current," reporting several hundred articles as their price stands on Friday of the week in question. The figures are obtained from a responsible firm or from several firms dealing in different lines of goods quoted and doing business in London and Manchester. Upon this basis the celebrated Economist index number has been built up. The prices quoted may be looked upon as reliable in view of the leading position held by the Economist and the persons from whom its information is drawn. There are evidences that this branch of the Economist's work has not always been prosecuted with equal vigor, but such periods are infrequent and short.

The first use of these figures was made by Tooke and Newmarch, who in their *History of Prices*, vol. 6, pp. 162 et seq., published the prices of the articles in our list for the first Friday of January, April, July, and October of each year from 1851 to 1856 as well as for February 1857, the date of going to press. Almost the entire edition of this volume was destroyed in an accident. The prices are reproduced in the table which follows. For these years there were no calculations of index numbers made except for January 1851 and July 1853. In the table which we give they have been supplied.

Mr. Newmarch continued his work in communications to the Royal Statistical Society, but has nowhere given the prices for July 1858 and July 1859. These dates are omitted in our tables.

In his report in 1860 (*Journal of the Statistical Society*, vol. 23, p. 102), Newmarch adopts the average prices for the six years 1845-1850 as a basis upon which to calculate relative prices or index numbers. He said that these years formed a sufficiently long period, prior to the disturbances effected by the gold discoveries, to constitute a proper basis of comparison. He bases his average upon the prices at the beginning of each quarter, and each base price is therefore the average of 24 quotations.

The Economist published these prices with the index numbers based upon them for the first time in a supplement in March 1864, entitled "Commercial history and review of 1863." From that date to the present time this series of supplements has been continued, the thirtieth issue appearing in February 1893, and giving a review of 1892.

In all 47 series of price quotations are published by the Economist. Not all of these are used, however, in the preparation of the index numbers, 12 being eliminated entirely, and the remaining 35 series being reduced to 22 by the grouping together of the prices of a number of similar articles in making the percentage calculations. The 22 articles considered, together with data as to the number of series of price quotations actually used in the calculation of the index numbers, are given in the table following.

NUMBER OF ARTICLES AND QUOTATIONS USED IN THE CALCULATION OF THE ECONOMIST'S INDEX NUMBERS.

Articles.	Quotations used in calcu- lating index numbers.
1. Coffee.....	1
2. Sugar.....	2
3. Tea.....	1
4. Tobacco.....	1
5. Wheat.....	1
6. Butchers' meat.....	4
7. Raw cotton.....	a 4
8. Raw silk.....	1
9. Flax and hemp.....	2
10. Sheep's wool.....	2
11. Indigo.....	1
12. Oils.....	3
13. Timber.....	2
14. Tallow.....	1
15. Leather.....	1
16. Copper.....	1
17. Iron.....	2
18. Lead.....	1
19. Tin.....	1
20. Cotton wool.....	a 1
21. Cotton yarn.....	1
22. Cotton cloth.....	2
Total.....	a 35

a Pernambuco fair cotton included in raw cotton and also shown as cotton wool.

As has been stated, but 22 series of index numbers are given, these being based in some instances on two or more series of price quotations for similar articles. For example, 2 series of price quotations are used in calculating the index numbers for sugar, 4 for butchers' meat, 4 for raw cotton, etc. The quotations of actual prices in these instances were probably averaged and the results used in calculating the index numbers. The prices used are wholesale quotations mainly from firms engaged in trade in the London and Manchester markets.

The base or standard from which these index numbers have been calculated is the average price for the six years 1845 to 1850, this average being calculated from the prices at the beginning of each quarter, making a total of 24 quotations used in the same. This average price for each article for the period selected as the base or standard having been calculated, the average price on January 1 and July 1 of each year is divided by it in order to secure the relative price or index number for such dates of each year. For example, the average price of coffee for the base period 1845 to 1850 was the mean between 44 and 54 shillings, or 49 shillings. This being the basis of comparison is taken as 100 and the average price for January 1 and July 1 of each succeeding year is divided by it to secure the index numbers. Thus the average price of coffee January 1, 1890, was 91 shillings, which, divided by the base (49 shillings) gives 186, showing that the average price of coffee on January 1, 1890, was 186 per cent of the base price, and 186 is therefore the relative price or index number for coffee for that date. An increase of 86 per cent is thus shown. Likewise, the price on January 1, 1896 (84½ shillings), divided by the base (49 shillings) shows a relative price for that date of 172, or an increase of 72

per cent over the average price for the base period. In this manner a series of index numbers is secured for each of the 22 selected commodities covering each year of the period. By adding the 22 series of index numbers secured in this manner a total index number is found which serves to indicate changes in the level of prices generally from year to year. These total index numbers may readily be reduced to the ordinary form of the index number (basis of 100) by dividing by 22, the number of articles considered.

The objection to this method, that equal weight is given to articles of very unequal importance, has been seen by the authors, and their tables are accompanied in every instance by the following note:

The total index number does not, of course, present a full and accurate representation of the variations of prices, inasmuch as it can not allow for the relative importance of the different articles. Wheat, for example, reckons for no more in the total index number than indigo; and during the years of the high price of cotton and cotton fabrics the total index number is, in a measure unduly raised by that special cause. Still, the total index number, read with the needful qualifications, may afford important inferences.

PALGRAVE'S INDEX NUMBER.

In the effort to remove the above objection, Mr. R. H. Inglis Palgrave endeavored, in a memorandum submitted in 1886 to the Royal Commission on the Depression of Trade and Industry, to weight the Economist's index numbers according to the relative importance of the commodities. For the new index numbers the average price of the years 1865 to 1869 was taken as the basis, instead of that of the years 1845 to 1850. The value of the quantity of each of the articles considered, annually consumed in the United Kingdom, is next calculated from its production and imports less exports. The value of the total annual consumption of these articles in each of the years considered is next found by simple addition. The consumption of each article in any given year is then divided by the total consumption of all articles in that year, a percentage being thus secured which represents the relative importance of the particular article as regards total consumption. The Economist's base sum of 2,200 is then multiplied by this per cent in order to bring the figures to a number which will show the importance or weight of each article in a total of 2,200. The resulting numbers are then multiplied by the Economist's index numbers of the several articles for the year, reduced to the basis of the average price of the years 1865 to 1869, and the numbers thus obtained represent in the case of each article the index number for the year, weighted according to the importance of the consumption of the article as compared with the total consumption of the selected articles. These calculations may be understood more readily by means of an example. The following are the figures for

1885, showing the value of the consumption in the United Kingdom of the 19 articles used by Mr. Palgrave, the relative importance of that consumption, if the total consumption be represented as 2,200, and the index number for each article for 1885, on the basis of average price of the years 1865 to 1869, weighted according to the importance of the consumption of the article as compared with the total consumption of the selected articles:

INDEX NUMBERS WEIGHTED ACCORDING TO RELATIVE IMPORTANCE OF COMMODITIES
AS REGARDS CONSUMPTION IN 1885.

Articles.	Value of consumption during the year 1885.	Relative impor- tance of consump- tion in a total of 2,200.	Index number (basis of 1865-1869), each article weighted according to con- sumption.
Cotton, raw	£31,600,000	263	101
Silk	1,400,000	12	6
Flax and hemp	5,900,000	49	30
Wool	17,100,000	142	99
Meat	63,000,000	524	535
Iron	18,000,000	150	123
Copper	4,680,000	39	23
Lead	1,550,000	13	7
Tin	1,800,000	15	12
Timber	19,650,000	164	176
Tallow	3,340,000	28	24
Leather and hides	9,600,000	80	88
Indigo	600,000	5	6
Oils	5,900,000	49	34
Coffee	930,000	8	5
Sugar	17,920,000	149	79
Tea	8,500,000	71	49
Tobacco	3,500,000	29	30
Wheat and flour	49,350,000	410	242
	264,320,000	2,200	1,669

It is seen that the value of the total consumption of the 19 articles in 1885 was £264,320,000. The relative importance of any article—wheat and flour, for example—is found by dividing the consumption of that article (£49,350,000) by the total consumption (£264,320,000), giving a per cent of 18.67, which is in turn multiplied by 2,200 (the Economist base) to find its importance as regards that number. The result is 410, as given in the table under “Relative importance.” The figures for the other articles in the list are calculated in a similar manner. In the Economist’s index numbers, in which each article is given an equal importance, the drop in the price of wheat is shown to be 41 per cent from the base period (1865 to 1869), or, in other words, it is shown that the depression in price has sent the index number of that article down to 59.^(a) Therefore the index number of wheat

^a Mr. Palgrave states that “the Economist index number for January, 1885, gives 60, not 59, but as the average price of wheat for the year was below the January price, 59 has been taken as a more correct measure for a calculation extending over the entire year.”

weighted according to its relative importance in the consumption in 1885 is shown to be $59 \times \frac{410}{100}$, or 241.90, and is entered at 242. The new index numbers for the remaining articles are calculated in a similar manner, the total furnishing a new weighted index number for the year.

The following table gives for the years 1865 to 1885 the Economist's index numbers reduced to the basis of the average for the years 1865 to 1869, each commodity having equal weight, and the same index numbers as weighted by Mr. Palgrave according to the method just explained, together with percentages showing the results as based on 100 for the base period, 1865 to 1869. These latter are secured by dividing each total by 22, the number of articles considered.

COMPARISON OF ECONOMIST'S AND PALGRAVE'S INDEX NUMBERS, REDUCED TO SAME BASIS.

Year.	Economist's index numbers, each commodity having equal weight.		Palgrave's index numbers, each commodity weighted according to consumption.	
	Total.	Average.	Total.	Average.
1865	2,434	111	2,366	107
1866	2,449	111	2,434	111
1867	2,156	98	2,179	99
1868	1,982	90	2,058	94
1869	1,979	90	1,963	89
Average.....	2,200	100	2,200	100
1870	1,995	91	1,975	90
1871	1,981	90	2,046	93
1872	2,132	97	2,197	100
1873	2,237	102	2,298	104
1874	2,207	100	2,378	108
1875	2,098	95	2,125	97
1876	2,044	93	2,186	99
1877	2,064	94	2,205	100
1878	1,910	87	2,081	95
1879	1,676	76	1,806	82
1880	1,918	87	1,967	89
1881	1,782	81	2,054	93
1882	1,830	83	1,908	87
1883	1,755	80	1,924	88
1884	1,660	75	1,750	80
1885	1,550	70	1,669	76

It is seen that while in several years prices exhibit different tendencies yet on the whole those differences are not very great. The weighted average, however, is generally somewhat higher than the simple one.

SAUERBECK'S INDEX NUMBER.

Mr. Augustus Sauerbeck, a wool broker, of the firm of Schwartze & Co., London, undertook the preparation of this series of index numbers, mainly in response to a desire for a broader basis for calculation than that used in the London Economist series. The result of his work was first published in 1886 in the Journal of the Royal Statistical Society, and the data for succeeding years have been printed from time to time in

that journal. In all, quotations for 56 commodities are given in Mr. Sauerbeck's price tables. This number is however reduced by combination to 45 in his index numbers. Each of these 45 series of index numbers may be considered to be for different descriptions of commodities, for while more than one series of index numbers is made for wheat, beef, mutton, sugar, coffee, etc., they are for quite distinct kinds. In the selection of commodities, their importance in the consumption of the United Kingdom is taken into consideration, only such commodities being taken as reach a consumption of £1,000,000 or more per annum. The earlier prices used by Mr. Sauerbeck were obtained from the files of trade journals. For a number of years, however, they have been carefully collected by Mr. Sauerbeck himself, either from trustworthy trade journals or from leading firms in various lines of trade. The prices are for wholesale transactions. The annual prices are the averages of 12 monthly or 52 weekly quotations, except prices of potatoes which are the averages of 8 monthly quotations, January to April and September to December. Mr. Sauerbeck prefers such annual averages to prices at certain dates (as January 1 and July 1), which is the method adopted by the Economist.

The base or standard in this series of index numbers is the average of the prices for the eleven years from 1867 to 1877. The reasons for the selection of these years as the base are given in the Journal of the Royal Statistical Society, volume 49, pages 591 and 592, but they do not seem necessary in this connection. The index numbers have been calculated in the ordinary arithmetical way. For example, the average price of English wheat for the base period (1867 to 1877) was 54s. 6d., which is taken as 100. The average for each year of the period is divided by this base in order to secure the index numbers for such years, which represent simple percentages of the base price. By dividing the average price of English wheat in 1855 (74s. 8d.) by this average for the base period a result of 137, or 37 per cent above the base price, is secured; or by dividing the price for 1895 (23s. 1d.) by the base a result of 42 is secured, or 58 per cent below the base price.

Six groups are made of the 45 descriptions of commodities, and average index numbers are made for each group, together with a general average for all the commodities combined. In these averages all of the 45 individual commodities are treated as of equal value, the averages of groups as well as of all commodities being made by dividing the sum of the individual index numbers involved by the number of the same. The grouping is shown in the following table, which is for the year 1898, and is based on the average of 1867 to 1877 as 100.

SAUERBECK'S INDEX NUMBERS FOR 1898, SHOWING GROUPING OF COMMODITIES.

Groups of commodities.	Number of index numbers.	Sum of index numbers.	Average of index numbers.
1. Vegetable food (wheat, flour, barley, oats, maize, potatoes, and rice).	8	538	67
2. Animal food (beef, mutton, pork, bacon, and butter).....	7	542	77
3. Sugar, coffee, and tea.....	4	205	51
Total food (groups 1 to 3).....	19	1,285	68
4. Minerals (iron, copper, tin, lead, and coal)	7	493	70
5. Textiles (cotton, flax, hemp, jute, wool, and silk)	8	405	51
6. Sundry materials (hides, leather, tallow, oils, soda, nitrate, indigo, and timber)	11	698	63
Total materials (groups 4 to 6)	26	1,596	61
General average.....	45	2,881	64

Index numbers are calculated for each of the 45 descriptions of commodities for each year, as well as for the groups as indicated above. The grouping, as shown in the preceding table, is for convenience in comparing the aggregate of related commodities from year to year. In the table given, which is for the year 1898, it is seen that food, for example, has a relative price of 68, as compared with the average for the base (1867 to 1877), which in every case equals 100, indicating a drop of 32 per cent in this group as a whole for 1898 as compared with the base period. The general average is likewise seen to equal 64 as compared with 100 for the base price, a drop of 36 per cent. The period covered by Mr. Sauerbeck begins with 1846.

While each of the 45 quotations comprised in these index numbers is treated as being of equal importance, a certain weighting is roughly made by using a greater or less number of quotations according to the general importance of the commodity, which is determined by its consumption in the United Kingdom. Thus wheat is given 3 quotations—English wheat, American wheat, and flour—while barley, maize, etc., have but 1 quotation each. Two brands of coffee are quoted, but in computing averages for the group and for all commodities the mean of the two index numbers is taken, giving but the weight of a single quotation to this article. Other less important articles were treated in a similar manner. Great care seems to have been taken in this selection of articles, and the index numbers from time to time have been subjected to tests to determine their correctness in indicating the actual course of prices. The most important of these is based on the production in the United Kingdom of the articles considered at the prices used in these price tables, and the imports at board of trade values, thus measuring a considerable proportion by a different set of prices. According to this method the quantities in the United Kingdom for a given year or period are multiplied by the prices at that period in order to secure an “estimated actual value” for the period. These quantities are also multiplied by the average prices

for the base period (1867 to 1877) to secure the "nominal values at average prices of 1867-1877." The new index number is then the per cent secured by dividing the value of the quantities consumed at the given date, at the prices for that date, by the value of the same quantities at the base prices. The results of these calculations are shown in the following table, taken from the Journal of the Royal Statistical Society:

MOVEMENTS OF FORTY-FIVE COMMODITIES IN THE UNITED KINGDOM (PRODUCTION AND IMPORTS).

Year.	Estimated actual value in each period.	Nominal values at average prices of 1867-1877, showing increase in quantities.	Relative prices according to this table, 1867-1877 =100.
1848-1850 (average).....	£219,800,000	£294,800,000	74.6
1859-1861 (average).....	350,100,000	382,700,000	91.5
1869-1871 (average).....	456,600,000	484,600,000	94.2
1871-1875 (average).....	548,800,000	526,300,000	104.3
1874-1876 (average).....	537,800,000	538,400,000	99.9
1879-1881 (average).....	489,700,000	578,500,000	84.6
1884-1886 (average).....	445,700,000	610,100,000	73.0
1889-1891 (average).....	504,100,000	685,200,000	73.6
1894-1896 (average).....	453,700,000	723,500,000	62.7
1896.....	461,200,000	743,000,000	62.0
1897.....	465,100,000	732,200,000	63.5
1898.....	498,700,000	772,400,000	64.6
1899.....	519,800,000	772,500,000	67.3
1900 (a).....	599,200,000	762,800,000	78.6

a 1900 subject to correction after publication of the complete mineral produce returns.

From the table it is seen that in the earlier years the average for periods is used, while since 1896 that for each year is given. Columns 2 and 3 are calculated in the manner heretofore explained. Column 4 is secured by dividing column 2 by column 3, and, as explained, represents the new index numbers weighted according to production and imports. These do not differ greatly from the simple index numbers. For example, the average of the simple index numbers for the years 1884 to 1886 is 72.3 as against 73 for the weighted index number; for 1889 to 1891 it is 72 as against 73.6; for 1894 to 1896 it is 62 as against 62.7; for 1896 it is 61 as against 62; for 1897 it is 62 as against 63.5; for 1898 it is 64 as against 64.6; for 1899 it is 68 as against 67.3, while for 1900 it is 75 as against 78.6.

SOETBEER'S INDEX NUMBER.

The most widely known series of European index numbers, aside from those of the London Economist and Mr. Sauerbeck, is that of Dr. Adolf Soetbeer. These index numbers were first published in 1886 and were based on the prices of the bureau of commercial statistics of Hamburg. These prices as originally published were for the years from 1847 to 1885, and represented over 300 series of quotations. Beyond 1888 they were continued with difficulty, owing to the fact

that in that year Hamburg became a part of the German customs union, and the record of goods coming in by land was no longer made.

The following statement explains the method of ascertaining these prices, and indicates their special value for purposes of comparison:

All goods imported into Hamburg are reported to the bureau of commercial statistics. These reports contain a statement of the kind of goods and their weight, to which is added their value, calculated by the price of the article upon the day in question on the Hamburg exchange. For goods not quoted on the exchange the invoice value, plus freight, insurance, and other charges, must be given. The yearly trade statements are made up from these reports. Having the total quantity and total value, the calculation of the average price is a simple arithmetical calculation. But in view of the peculiar circumstances of Hamburg as a free harbor, and of the fact that the declared values are based on ruling Hamburg prices, the results have a high value quite unusual for import prices.

To the prices secured from this source Dr. Soetbeer added those of several articles, such as potatoes, meat, etc., which were obtained from the records of hospitals and other institutions in Hamburg. There were also considered the prices of 14 manufactured articles of British export. In all, 114 articles are included in these index numbers.

The average of the prices for the four years from 1847 to 1850 was taken as the base or standard, and, giving this average a value of 100, percentages were made in the usual manner, showing the relative prices for the years from 1851 to 1885, as measured by this base or standard. A continuation of these prices to include 1891 has been made by Mr. Heinz.

UNITED STATES SENATE FINANCE COMMITTEE INDEX NUMBER.

Perhaps the largest collection of prices which has ever been made under a uniform system, with the exception of that which forms the basis of the United States Department of Labor index numbers, as shown in the present article, is that of the United States Senate Finance Committee. Two hundred and thirty series of quotations were presented covering the prices of manufactured articles, as well as food products and raw materials. The general period covered was the fifty-two years from 1840 to 1891. While all series of quotations did not cover the entire period, owing to the difficulty of securing for the earlier years prices of articles in use during the later years, quotations were secured for 90 articles in 1840, of which 85 continued to 1891, while 223 series of quotations were given covering the years from 1860 to 1891, and of these latter some covered also a number of years previous to 1860. The term "series of quotations" has been used in preference to the word "articles," as the number of different articles considered was much fewer than 230, two or more series for different descriptions of similar articles having been given in many cases.

The prices used were wholesale prices, and in most instances were taken directly from the books of merchants and manufacturers. The exceptions were those obtained from trade journals, large buyers, etc. The base or standard was the price for the year 1860. The reasons for the selection of this year are given as follows in the report of Prof. Roland P. Falkner, the statistician of the committee, on page 28 of the Report on Wholesale Prices, Wages, and Transportation, Part I:

While in many respects it would have been highly desirable to have selected as the basis of the analysis either the year 1840, or the average of the years 1840 to 1845, which constituted the starting point of the investigation, for practical reasons this plan had to be abandoned. A system of relative prices for fifty-two years, comprising 90 articles, would, it is true, be more comprehensive, both as to volume and the period covered, than the majority of previous investigations. Yet such a statement would have rendered comparatively useless for purposes of comparison all the articles the quotations for which begin later than 1840. On the 1840 basis it would have been impossible to have carried out the analysis of the figures presented in all the refinements of which they are capable and which were desired by the committee. For this reason it was deemed advisable to select a period which would incorporate in the analysis a larger proportion of the figures which are presented.

After a careful consideration of all the circumstances it was considered that the basis best adapted for the analysis was the price of the year 1860, and in the following analysis that year is the basis of all our comparisons. It is considered as 100, and the prices of prior and subsequent years are expressed as percentages of the same. The year 1860 represents a period in our industrial development midway between the older methods of production that prevailed before the war and those which have come into use since that period. It is also a period of comparatively normal prices. The markets of the country had recovered from the crisis of 1857, and the disturbances of trade caused by the war had not yet taken place. The year 1865, midway between the beginning and end of the investigation, is utterly unadapted to serve as a base by reason of the inflated state of the currency, which caused a wholly abnormal condition of the market. The same is equally true of the average for 1865-1869, inclusive, which is the basis of the celebrated calculations of Mr. Palgrave in the Report of the Commission on the Depression of Trade and Industry. The year 1870 is still too much under the influences of the currency inflation to serve as a basis of comparison, besides being open to the objection that it is too close to the present day to furnish useful comparisons.

While in the investigations of English and European statisticians it has not been customary to take a single year for a basis, but rather the average for a period of years, * * * there were important reasons why, in the analysis here presented, a single year should be taken as a basis of comparison. It was not always practicable to secure for the articles in question the average prices that would have covered the period immediately prior to 1860, while in the following year some prices already manifested the disturbances due the unsettled state of national affairs. The choice of an abnormal year would have been a mistake, but the year 1860 presents all the aspects of a normal year. Its price varies little from that of 1859 or of 1858 on the one

hand, and of 1861 on the other. It is, therefore, quite as proper a basis of comparison as would be an average of these four years. No scientific reason has been adduced why an average should be preferable to a single year, except that in an average the abnormal features of individual years tend to disappear. If, however, a single year can be found which presents no features which are to be considered abnormal it is quite as accurate to take this year as a basis as to take a group of years of which this forms a part. These considerations have led us to the belief that the year 1860 is perfectly adapted to serve as base of the analysis.

The prices which served as the basis for the index numbers were usually prices for a given date (as January 1, April 1, July 1, or October 1) of each year, although in a few instances they were average prices for the year. The index numbers were calculated on the basis of the January prices in each year where the prices were quoted quarterly, except in the case of those articles for which the January price was not the representative price for the year, as for fresh vegetables, etc., in which latter cases the most appropriate month was selected. In order to secure the index numbers for each description of commodity, the price for each year of the period was divided by the price for the base year, 1860. The results are simple percentages of the price in the base year, and the method differs in no respect from that usually adopted. For the purpose of comparing these index numbers for related articles, eight groups were formed, as follows: Food, cloths and clothing, fuel and lighting, metals and implements, lumber and building materials, drugs and chemicals, house furnishing goods, and miscellaneous. In securing the average of the index numbers for each group and for all articles, each article, or series of quotations, was given equal weight or importance in the formation of the result, which was secured by adding the index numbers for each year and dividing the sum in each case by the number of index numbers used. Ninety articles were used in obtaining the index number of all articles in 1840, while 223 articles were used for this purpose in 1891. In addition to these general index numbers based on the year 1860 a number of comparisons are made based on other years, on selected lists of articles, etc.

It was recognized by the committee that a list containing so many articles must include many of comparatively slight importance, and that the index numbers must be measured in some way by the amount of consumption of the various articles in order to ascertain the real effect upon the consumer of the changes which had occurred in prices. Unless this were done, equal weight would have been given to articles little used and articles of large and daily consumption. For example, the index number of wheat flour was 72.1 in 1891, while that of nutmegs was 142.9. To state that the average price of the two articles was 107.5, the mean between the two, would manifestly have been

unfair. The comparison must be made by assigning to each of the two an importance in the result equal to its importance in general consumption. The basis selected by the committee for determining this consumption was the Seventh Annual Report of the Commissioner of Labor, showing the values of various articles consumed by a large number of families, which were considered typical of the expenditures of the mass of the people.

DISTRIBUTION OF EXPENDITURE FOR 2,561 NORMAL FAMILIES.

Group.	Per cent of expenditure for each purpose.	Proportions of 10,000.
Rent.....	15.06	1,506
Food.....	41.03	4,103
Fuel.....	5.00	500
Clothing.....	15.31	1,531
Lighting.....	.90	90
All other purposes.....	22.70	2,270
	100.00	10,000

This table shows the main groups of family expenditures only, and these were not sufficiently specific for the purpose. In order to secure accurate and specific data as to the composition of these groups themselves, therefore, 232 special budgets of family expenses were collected. The table based on 2,561 families was then used to secure the proportion of the groups entering into consumption, while a table based on 232 families was used to secure the distribution of expenditure within the groups themselves. The figures thus secured, showing the relative weight in consumption of each article contained in the family budgets, were then applied to the various articles in the index numbers. Few articles were found, however, with identical descriptions, hence a method of grouping was resorted to. For example, two or more articles contained in the index numbers were often grouped to represent one article of the family budget, thus, "ham," "bacon," and "pork" were considered equivalent to the "hog products" of the family budgets, and an arithmetical average was made of the index numbers of these three articles, which was made the index number of hog products and given its appropriate weight. Briefly described, the method as applied to the food group was as follows: The figure denoting the importance of each article in the group in a given year was multiplied by its simple index number (or the average where two or more articles were grouped), and the sum of these products was divided by the total of the figures denoting importance for the weighted index number for the general group of food. This method was used in securing similar weighted index numbers for the other years of the period. It is seen that according to this method the same weights were used for each year of the period, although they were based on the consumption of families in 1891.

The following table shows the weighted relative prices or index numbers in 1891 for each of the groups considered, together with the total weighted relative price or index number:

RELATIVE PRICES OF ALL ARTICLES, 1891, BASED ON 1860, MEASURED BY CONSUMPTION.

Group.	Importance.	Weighted index number.	Result.
Rent.....	1,506	100.0	1,506,000
Food.....	4,103	103.7	4,254,811
Fuel.....	500	98.1	490,500
Lighting.....	90	48.1	43,290
Clothing.....	1,531	75.1	1,162,029
All other purposes.....	2,270	95.3	2,164,096
Total.....	10,000	96.2	9,620,726

In the above table the weighted index numbers for the various groups were found in practically the same manner as has been previously described for food, except that rent and certain items entering into the group "all other purposes" were considered to have remained unchanged. These were then multiplied by the figures denoting importance, and the sum of the products divided by the total of the figures denoting importance (10,000) to secure the weighted total of 96.2. The remaining years were treated in a similar manner.

The items of budget expenditure considered as remaining unchanged (rent, taxes, insurance, etc.) constituted 31.40 per cent of the total expenditure, leaving 68.60 per cent as affected by changes in prices. Another set of index numbers for such articles was made by the committee by assigning a total numerical weight of 6,860 to such articles, and working out the index numbers on that basis. This resulted in a slightly different total index number.

The index numbers computed by the three methods, i. e., simple average, average of all articles weighted according to consumption, and average of fluctuating articles only, weighted according to consumption, are shown in the table on page 100 of Wholesale Prices, Wages, and Transportation, Part I.

A continuation of this series of prices has been published in the Bulletin of the Department of Labor, No. 27, by Dr. Falkner, bringing them down to 1899. In this latter series, however, two important changes of method were adopted by Dr. Falkner. The first was in adopting as a basis the average price for the nine quarters, January, 1890, to January, 1892, inclusive, in place of the single date basis, and the second in departing from the simple average method of allowing to each article equal weight, and instead combining the index numbers of similar articles to form one index number, to be used as one article only in calculating the index numbers for groups and for all commodities.

COMMONS' INDEX NUMBER.

Prof. John R. Commons, in the Quarterly Bulletin of the Bureau of Economic Research for July and October, 1900, published a compilation of index numbers of wholesale prices, freight rates, railroad stocks, etc., for the twenty-two years from July 1, 1878, to June 30, 1900, the crop year being used. Sixty-six commodities enter into this compilation of index numbers of wholesale prices. The quotations were all taken from standard trade journals and related only to staple articles of a uniform grade and with an open market. Highly manufactured articles were not included, as uniform quotations for these could, in most cases, be secured only from manufacturers' books.

The yearly figures in these index numbers are averages of weekly quotations in the case of all articles of frequent fluctuations, and in other articles, such as chemicals and building materials, they are the averages of one quotation each month.

The base in these index numbers is the average price for the ten years 1879 to 1889 (crop year July 1 to June 30). The index numbers have been calculated in the ordinary way, the average price of each article for the base period being given the value of 100 and all other quotations for the same article being expressed in percentages of this base. For example, the average price of No. 2 spring wheat on the Chicago market for the base period 1879 to 1889 (crop year July 1 to June 30) was 94 cents. The average price for the crop year 1898-99 was 71 cents. Giving to 94 cents (the price for the base period) the value of 100, the index number or relative price for 1898-99 is 76; that is, the price for the crop year 1898-99 is 24 per cent below the average price for the base period.

The 66 commodities have been divided into 5 general groups, some of these in turn being divided into subgroups. Index numbers are calculated for each commodity, for the subgroups, for the general groups, and for all the 66 commodities for each of the twenty-two years and also for each month from July, 1896, to September, 1900.

For the subgroups, general groups, and all commodities for each of the twenty-two years, the index number is the simple average, which was found by dividing the sum of the index numbers or relative prices in the group under consideration by the number of commodities in the group. A weighted average is also shown, and this is secured by giving to each article a weight equal to its annual domestic product in millions of dollars, articles whose product was less than a million dollars being arbitrarily assigned the value of one unit. Imported articles are given a weight estimated at the value added by the import trade. In the chemical group the individual articles are not weighted, but the group as a whole is given the value set by the census estimates. In estimating the value of manufactured articles the value of the crude material, where an index number is also shown for the crude, has been deducted

from the value of the manufactured article. For example, the weight given to flour is the estimated home product of flour minus the value of the wheat used, based on the average price of both for the year at $4\frac{1}{2}$ bushels of wheat per barrel of flour. This method of weighting by the annual product necessitated a different computation for each year. The total value represented by the 66 commodities was \$2,824,000,000 in 1879 and \$3,816,000,000 in 1899. Professor Commons does not claim accuracy for his figures of production, but believes that they indicate fairly the relative importance in the total of American production. Whenever official figures could be found they were used. Census figures were taken, except where they were obviously incorrect, and the intervening years were estimated. The weighted do not differ greatly from the simple index numbers.

DUN'S INDEX NUMBER.

The publication of Dun's index numbers was begun in Dun's Review of January 12, 1901, and has been continued monthly since that date. The object is to give "the cost of a year's supplies of all the necessities of life" for a single individual. These necessities embrace 350 articles and are divided into seven groups, namely, breadstuffs, meats, dairy and garden products, other food, clothing, metals, and a miscellaneous class. The prices given for the groups are based upon the actual wholesale prices of the various articles entering into them as quoted on the first day of each month. These index numbers differ from all others in that no date or period is taken as a base, the figures given being actual prices in dollars and cents for the date instead of percentages of the price for some date or period which has been taken as a base. The complete list of the 350 articles used in calculating the index numbers is not given, nor are the figures of annual consumption per capita and the methods by which such consumption is determined stated. The methods employed, so far as the details have been published, are explained in the Review of September 7, 1901, as follows:

After selecting a list of articles covering all the necessities of life, including whisky, beer, and tobacco, each quotation is multiplied by the quantity annually consumed by each inhabitant, as nearly as may be ascertained by statistical records. While these figures can not be considered exact, the approximation is sufficiently close to attain the desired result, and the ratio being constant the comparison with different dates shows to a cent the rise or fall in cost of living. In many cases a large number of quotations are averaged in order to secure a representative price for the commodity, thus avoiding the special effect on one particular grade of exceptional conditions. Both raw materials and manufactured products are included, preventing the excessive influence of speculative operations in the former, since markets for finished products are more stable. In these cases the per capita consumption is so proportioned as to avoid duplication. Wholesale quotations are taken, as they are more sensitive to changed conditions, and there is more uniformity in those markets.

Using quantities representing the per capita consumption gives each commodity its proper value. It would obviously be useless to take an equal quantity of each article, since a sharp rise or fall in the price of something little used might more than balance the change in a commodity of large daily requirement. Hence, this proportionate distribution makes the index number show clearly the cost of living at various dates by giving due regard to the relative importance of each article. Lack of space makes it impossible to publish the full list, and for the sake of convenience in comparison the 350 quotations are grouped in 7 classes. No luxuries are included, beyond silk and tobacco, which are of such general consumption as to be practically essential to a faithful record.

In the following table the index number is given for each month in 1901, as published in Dun's Review of January 4, 1902:

DUN'S INDEX NUMBERS FOR 1901.

1901.	Bread-stuffs.	Meats.	Dairy and garden.	Other food.	Clothing.	Metals.	Miscellaneous.	Total.
January 1	\$14.486	\$8.407	\$15.556	\$9.504	\$16.024	\$15.810	\$15.881	\$95.668
February 1.....	15.062	8.592	13.866	9.418	16.271	15.845	15.956	95.010
March 1.....	15.070	8.696	13.898	9.396	15.460	15.875	16.471	94.866
April 1.....	15.221	9.294	13.519	9.208	14.991	16.048	16.629	94.910
May 1.....	16.112	9.251	14.983	9.154	14.945	15.179	16.596	96.220
June 1	15.635	9.224	13.161	9.116	14.882	15.249	16.532	93.799
July 1.....	14.904	9.430	11.030	9.086	15.098	15.344	16.617	91.509
August 1.....	16.668	9.151	13.261	9.253	15.027	15.345	16.625	95.330
September 1.....	17.369	9.530	13.009	9.153	15.234	16.091	16.525	96.911
October 1	17.146	9.517	13.164	9.190	15.279	15.760	16.835	96.891
November 1.....	17.840	8.929	13.622	9.157	15.342	15.876	16.977	97.743
December 1.....	19.528	9.259	15.675	9.081	15.331	15.722	16.782	101.378

In connection with the above figures the following explanation is given:

Breadstuffs include many quotations of wheat, corn, oats, rye, and barley, besides beans and peas; meats include live hogs, beef, sheep, and many provisions, lard, tallow, etc.; dairy and garden products include eggs, vegetables, and fruits; other foods include fish, liquors, condiments, sugar, rice, tobacco, etc.; clothing includes the raw material of each industry, and many quotations of woolen, cotton, silk, and rubber goods, as well as hides, leather, boots and shoes; metals include various quotations of pig iron, and partially manufactured and finished products, as well as minor metals, coal and petroleum. The miscellaneous class embraces many grades of hard and soft lumber, lath, brick, lime, glass, glassware, turpentine, hemp, linseed oil, paints, fertilizers, and drugs.

DEPARTMENT OF LABOR INDEX NUMBER.

The present series of index numbers or relative prices represents the course of wholesale prices for the twelve years from 1890 to 1901. In all, 250 series of quotations were secured for the entire period and an additional 11 for some portion of the period. Although in the case of commodities of great importance more than one series of quotations have been used, in no case have more than one series of quotations been used for two exactly similar articles. For this reason the terms

“series of quotations” and “commodities” have been used interchangeably in the pages which follow. The actual prices on which the index numbers or relative prices have been based are shown in Table I in detail. In securing these prices the effort has been made to include staple commodities only. In a number of instances it has been found possible to secure prices for the same commodities that were included in the Report on Wholesale Prices, Wages, and Transportation submitted by Mr. Aldrich from the Senate Committee on Finance March 3, 1893. Many articles which were included in that report are no longer manufactured, or, if still manufactured, have ceased to be important factors in the market. On the other hand a number of articles, not shown in that report, have become of such importance as to render necessary their inclusion in any study of the course of prices.

The commodities covered by the 261 series of quotations have been classified under 9 general groups, as follows:

- Farm products, 16 series of quotations.
- Food, etc., 54 series of quotations.
- Cloths and clothing, 76 series of quotations.
- Fuel and lighting, 13 series of quotations.
- Metals and implements, 39 series of quotations.
- Lumber and building materials, 27 series of quotations.
- Drugs and chemicals, 9 series of quotations.
- House furnishing goods, 14 series of quotations.
- Miscellaneous, 13 series of quotations.

The further description of the kind of prices quoted, the sources of these quotations, the market for which they were secured, their frequency, etc., will be taken up in connection with the discussion of Table I, which follows:

Table I.—Wholesale prices of commodities, 1890 to 1901, pages 244 to 455.—This table shows in detail the actual prices on which the subsequent tables of index numbers are based. As stated previously, the 261 series of quotations have been classified under 9 groups of commodities, and this grouping has been uniformly adhered to in the several tables which are given.

The prices quoted in every instance are wholesale prices. Wholesale prices have invariably been used in compilations which have been made for the purpose of showing changes in the general price level. They are more sensitive than retail prices and more quickly reflect changes in conditions. Retail prices must usually follow the wholesale, but not generally in the same proportion. The margin between them in the case of some commodities is so great that slight changes in the wholesale price do not affect the retail. Changes in the wholesale price also which last for a short time only do not usually result in corresponding changes in the retail price.

The net cash prices are shown for textiles and all articles whose list prices are subject to large and varying discounts. In the case of a number of articles, such as white pine, nails, etc., however, whose prices are subject to a small discount for cash no deduction has been made.

Several articles quoted, such as grain alcohol and proof spirits, have been subject to a rebate in price during some portion of the period from 1890 to 1901. In order to avail himself of these rebates, the purchaser was usually required to sign an agreement to purchase only from a certain company or combination, while in some instances the rebate was allowed to all whose purchases amounted to a certain value within a prescribed time. These rebates were in the nature of a repayment to the purchaser at the end of a certain time, usually six months or one year. In this compilation of prices all rebates have been deducted, the intention being to show uniformly the lowest prices at which commodities could be purchased in the wholesale market.

These prices have been collected from the best available sources, such as standard trade journals, reports of boards of trade, chambers of commerce, produce exchanges, and leading manufacturers or their selling agents. Prices for 1901 which are credited to boards of trade, chambers of commerce, produce exchanges, etc., have not heretofore been published, but have been supplied by the officials of such organizations.

The prices quoted are usually the prices in the New York market, except for such articles as have their primary market in some other locality. For grains, live stock, etc., for example, Chicago prices are quoted; for fish, except salmon, Boston prices; for tar, Wilmington, N. C., prices; for cypress shingles, New Orleans prices; for white pine, Buffalo prices; for Elgin creamery butter, Elgin, Ill., prices, etc. The prices for textiles are the prices in the general distributing markets, such as New York, Boston, and Philadelphia; and where no market is mentioned in the prefatory note to Table I, it should be understood that the prices are for the general market.

The following table shows the different markets and the number of articles quoted for each market:

NUMBER OF COMMODITIES OR SERIES OF QUOTATIONS, CLASSIFIED BY MARKETS FOR WHICH SECURED.

Market.	Farm products.	Food, etc.	Cloths and clothing.	Fuel and lighting.	Metals and imple-ments.	Lum-ber and build-ing ma-terials.	Drugs and chem-icals.	House furnish-ing goods.	Mis-cella-neous.	Total.

As regards the description of the commodity, it should be stated that the greatest care has been taken to secure prices throughout the period for a precisely similar commodity. Changes in quality are, of course, reflected in prices, and for this reason note has been made of any important changes which have occurred. In the case of certain commodities, such as butter, eggs, etc., prices for the best quality have invariably been taken, in order to avoid frequent changes in grade. It should also be stated in this connection that in the case of commodities for which prices were secured from the Oil, Paint, and Drug Reporter the lowest quotations were invariably taken where a range of prices was found because of the fact that these represent the prices of large lots, while the high quotations represent the prices of smaller lots.

Weekly prices have been secured in the case of all articles which are subject to frequent fluctuations in price, such as butter, cheese, eggs, grain, live stock, meats, etc. In the case of articles whose prices are more stable, monthly, quarterly, semiannual, or annual prices have been taken. The following table shows the number of series of quotations of weekly, monthly, annual, etc., prices:

NUMBER OF COMMODITIES OR SERIES OF QUOTATIONS, CLASSIFIED AS TO THEIR FREQUENCY OF QUOTATION.

Frequency of quotation.	Farm products.	Food, etc.	Cloths and clothing.	Fuel and lighting.	Metals and implements.	Lumber and building materials.	Drugs and chemicals.	House furnishing goods.	Miscellaneous.	Total.
Weekly	13	22	1	1	1	38
Monthly	3	32	62	12	37	24	9	12	12	203
Quarterly for part of period and monthly for remainder of period	1	2	1	4
Annually	12	2	2	16
Total.....	16	54	76	13	39	27	9	14	13	261

The character of each series of quotations as regards frequency is shown in all cases in Table I in a prefatory note which states fully the date of the quotations and, if weekly, whether the quotations are for some one day of the week, the average for the week, or the range for the week. The majority of the weekly quotations show the price on Tuesday, and if for any reason Tuesday's price was not obtainable, the first price in the week has been taken. The quotations from the trade journals, when credited to the first of each month, are not in all instances the price for the exact day stated, as it is the custom of some of the daily trade journals to devote certain days to the review of the market of certain articles. For example, the Boston Herald quotes fish on Saturday only. The prices are, however, the earliest prices quoted in the journal to which the article is credited. It should also be stated that the prices credited to weekly publications are the earliest quotations shown in such publications for each month.

The average price for each year has been obtained by dividing the sum of the quotations for a given commodity by the number of quotations shown for the year. For example, the sum of the Tuesdays' prices of cotton for 1900 (shown in Table I) was \$4.996875, and the number of quotations 52. The former figure divided by the latter gives \$0.09609 as the average price for the year. Where a range was shown the mean price for each date was found, and this was used in computing the yearly average. The average yearly prices of all articles, including those taken from board of trade compilations, have been computed as above described. The reader will understand that, in order to secure for any commodity a strictly scientific average price for the year, one must know the quantity marketed and the price for which each unit of quantity was sold. It is manifestly impossible to secure such detail, and even were it possible the work of compilation would be much greater than the results would justify. It is believed that the method adopted here, which is also that used in the construction of other index numbers, secures results which are quite as valuable for all practical purposes.

An examination of Table I shows that the prices of some of the commodities included in these index numbers were subject to frequent and decided fluctuations, while the prices of others were almost, if not absolutely, uniform throughout the period. The following table shows the lowest and highest quotations and the dates of the same for each of the commodities during the twelve-year period:

LOWEST AND HIGHEST QUOTATIONS, 1890 TO 1901.

Tobacco: plug, Horseshoe, bright.	July, Aug 1892, Oct 1896 to May 1897.	.36	Jan to July 1901.	.47	Pound
Tobacco: smoking, granulated, Seal of N. C.	Jan 1890 to June 1898.	.50	July 1898 to Dec 1901.	.56	Pound

In a number of instances the lowest or highest price as shown in the foregoing table lasted for only a short time, in some cases but a few days or even a part of a day. The groups of farm products and food, etc., show the widest variations. Good to choice steers varied from \$3.00-\$3.90 on the second Tuesday of January, 1890, to \$5.65-\$6.40 on the first three Tuesdays of October, 1899. Corn ranged from 19½-20 cents the second Tuesday of September, 1896, to \$0.48½-\$1.00 the fifth Tuesday of May, 1892, the high price being due to an attempt to corner

corn in the Chicago market. The failure of those interested in the corner to take all corn offered at the high price, however, and the rumor that they had failed, resulted in a drop from \$1.00 to 48½ cents within a few hours. Cotton varied from 5 $\frac{5}{16}$ cents on the first Tuesday of February and the first and second Tuesdays of November, 1898, to 12 $\frac{1}{16}$ cents on the fourth Tuesday of May, 1890, and this high price was almost equaled in January, 1901, when cotton was quoted at 12 cents, due to speculation and an attempted corner, which was broken by the spinners offering their supplies of cotton for sale. Heavy hogs on the fourth Tuesday of July, 1896, were \$2.50–\$3.15 and on the second Tuesday of February, 1893, \$8.10–\$8.65. Hops ranged from 6–7 cents in September, 1895, to 45–47 cents in November, 1890. Oats ranged from 14 $\frac{3}{4}$ cents on the second Tuesday of September, 1896, to 54 $\frac{3}{4}$ cents on the second Tuesday of April, 1891. Native sheep ranged from \$0.75–\$3.25 on the fifth Tuesday of October, 1894, to \$5.25–\$6.65 on the fifth Tuesday of May, 1892. Western sheep show a similar range. Wheat ranged from 48 $\frac{5}{8}$ –49 $\frac{5}{8}$ cents the fifth Tuesday of January, 1895, to \$1.73–\$1.85 the second Tuesday of May, 1898. The high price is said to have been due to an attempt to control the price of that commodity and also to some extent to the war with Spain and the fear of other foreign complications. The most marked variations in the food group are in fresh vegetables, onions having varied from \$0.50–\$1 in May, 1896, to \$5–\$10 in February, 1890, and potatoes from 10–15 cents the third week of May and the third and fourth weeks of June, 1896, to \$1.10–\$1.35 the second week of June, 1891. Currants and dried apples show wide variations. Eggs varied from 10 $\frac{1}{4}$ –10 $\frac{1}{2}$ cents the first Tuesday of April, 1897, to 42–43 cents the third Tuesday of January, 1893; eggs also show a decided rise in February, 1899, the price on the first Tuesday being 19 $\frac{1}{2}$ cents and on the second Tuesday 30–31 cents, the rise being due to the small supply on account of the severe storms and blockaded condition of roads. Almost all the articles in the food group show wide variations, which may be seen by referring to the foregoing table. In the cloths and clothing group the variations are not so marked, as the price of many of the articles in this group depend more largely upon the cost of labor of producing them. Print cloths varied from 1.875 cents the second week of May, 1898, to 4.063 cents the second week of December, 1892. Of the raw materials in this group wool, medium fleece, scoured, varied from 29.03 cents in June, 1895, and June to September, 1896, to 62.10 cents in June, July, August, and November, 1890. In the fuel and lighting group Youghiogeny coal varied from 4 $\frac{1}{2}$ –4 $\frac{3}{4}$ cents (per bushel) in March and April, 1899, to 11 cents in November, 1891; coke from 92 cents in April and May, 1894, to \$3.25–\$4.25 in March and April, 1900; and petroleum, crude, from 51 $\frac{3}{8}$ cents in October, 1892, to \$1.79 in April, 1895.

In the group of metals and implements best refined bar iron varied from 0.95 cent (per pound) in July, 1897, to 2.60 cents in October, 1899; barb wire from \$1.65 in August, 1897, to \$4.13 in December, 1899, to March, 1900; while bar silver varied from 54.576 cents in February, 1898, to \$1.16995 in August, 1890. In lumber and building materials Rosendale cement, doors, linseed oil, plate glass, resin, tar, turpentine, and window glass varied widely. In drugs and chemicals opium shows the greatest variation—from \$1.50 in August, 1892, to \$3.75 in August, 1898. In the miscellaneous group cotton-seed meal, cotton-seed oil, news paper, and rope show wide variations.

Owing to the unusual method of fixing the scale of prices of cut and wire nails and the difficulties encountered in securing satisfactory quotations of prices for this commodity, it has been thought best to introduce here a somewhat lengthy description of the same, together with such tables, etc., as are necessary to afford a clear understanding of the matter. The nail trade makes use of what is termed a nail card. This is in the nature of a scale of prices, agreed upon by the different manufacturers who are members of the nail association, and is followed generally by the trade. A copy of both the cut and wire nail cards of December 1, 1896, which are still in use, follows:

NATIONAL NAIL CARD SCALE OF EXTRAS ADOPTED AT NEW YORK DECEMBER 1, 1896.

Cut nails.	Price above base per 100- pound keg.	Wire nails.	Price above base per 100- pound keg.
<i>Common, fence, and hook-head brads.</i>		<i>Common, fence, flooring, and common brads.</i>

It is seen that certain sizes, twentypenny to sixtypenny common, fence, flooring, and common brads, are termed “base,” and all other sizes are placed at a fixed amount above base. Prices quoted for nails are either stated or understood by the trade to be base prices. The base price for wire nails in December, 1901, was \$2.10 per keg. For tenpenny the buyer must pay 5 cents advance above base, or \$2.15 per keg; for eightpenny, 10 cents above base, or \$2.20 per keg; and for twopenny smooth finishing, \$1.15 above base, or \$3.25 per keg. Until superseded by another nail card these advances above base remain the same, while the fluctuations in price relate to the base sizes, and of course affect all sizes. Several nail cards have been in use during the 12 years from 1890 to 1901. The base sizes under the various cards,

and also the advance for the different sizes of common and fence nails, are shown in the following table:

BASE SIZES AND ADVANCE ABOVE BASE PRICE FOR THE DIFFERENT SIZES OF COMMON AND FENCE NAILS UNDER THE VARIOUS NAIL CARDS IN USE FROM 1890 to 1901.

a No base size; all nails sold at an advance above base price.

Because of the fact that the base has changed at various times during the period, as shown in the table, the so-called base prices show prices of entirely different nails from time to time, and are of no value for the purpose of showing the trend of prices during the period of twelve years. The base prices of cut nails under the card of October 22, 1889, for example, were for twelvepenny to sixteenpenny nails; under the card of March 13, 1890, the base prices were for fiftypenny to sixty-penny nails; under the card of February 21, 1893, base prices were for sixtypenny nails; under the card of July 18, 1895, they were for no size, as the base price was quoted and all nails were sold at an advance above base; and under the card of December 1, 1896, base prices were for twentypenny to sixtypenny nails.

After consultation with several of the leading dealers and experts in the nail and metal trade it was decided to show the prices of eightpenny nails for the whole period and compute relative prices from the prices of those nails, that size and the tenpenny being used in greater quantities than any other sizes, and the advance above base for eightpenny nails on the various cards corresponding more closely to the "average above base" (as explained below) than did the advance for any other size. The prices of eightpenny nails shown in Table I and subsequent tables are, then, the base prices of nails increased by the amount above base charged for eightpenny nails according to the various nail cards. Thus the base prices of eightpenny cut nails for the period from January, 1890, to February, 1893, were increased by 25 cents per keg; for the period from March, 1893, to November, 1896, by 60 cents; and for the period from December, 1896, to December,

1901, by 10 cents. The same method was followed in computing prices of eightpenny wire nails.

In order to render clear the steps taken in securing the actual prices of nails of the two descriptions used, the base prices of both cut and wire nails are given in the following table. These base figures show the prices quoted by the trade, and while they could not, for reasons heretofore explained, be used in computing relative prices, they form the basis on which is calculated the actual prices as given in Table I.

NAILS: CUT, BASE SIZES.

[Price per 100-pound keg on the 1st of each month f. o. b., mills or Pittsburg; quotations from the Iron Age. For base sizes under the various cards, see page 228.]

Owing to another custom which obtains in the nail trade, and more especially in the cut-nail trade, objection may be made to the prices of eightpenny nails as shown in Table I. On some of the earlier cards the prices of the large nails were very little above base, while prices of the smaller nails were considerably above base. Under the card of March 13, 1890, forty penny nails were 5 cents above, while twopenny were \$1.50 above. Under the card of December 1, 1896, forty penny were included in base and twopenny were 70 cents above base. It is said by nail manufacturers that an order for 100 kegs of forty penny nails from the card of March 13, 1890, would have meant a loss to the manufacturer, while an order for 100 kegs of twopenny nails from the same card would have meant a decided profit. To prevent such loss manufacturers felt compelled to refuse orders unless the nails ordered averaged a certain amount above base. This amount varied from time to time, being generally 30 to 35 cents on cut nails in 1891 and 1892 and 55 to 60 cents in 1894 and 1895. Upon the adoption of a new nail card an effort was made to arrange the prices of the various sizes more nearly according to the cost of material and manufacture, and thus prevent the consideration of an average above base, but these efforts were not successful except in the case of the card of 1896—the one now in use. It is said, however, by dealers that orders for such an assortment as a dealer would want in stock would have been filled by manufacturers. It has also been stated that the tendency of independent companies to manufacture largely the nails in which there was, under former cards, a decided profit, and then to undersell slightly the manufacturers who belonged to the association, doubtless to a considerable extent led to the decided reduction in price of the small nails on the card of December 1, 1896, and also to the adoption of the plan of quoting the different sizes at more nearly their real value.

From the last of May, 1895, until November, 1896, the prices and output of both cut and wire nails were, to a large extent, controlled

by the Cut and Wire Nail Association. This association was dissolved in December, 1896. In January, 1899, practically absolute control of the wire-nail trade passed into the hands of one company, and from that time until April, 1900, the prices of both wire and cut nails show a gradual advance. On April 21, 1900, the controlling company cut their price of wire nails \$1 per keg, and cut nails, of course, followed to some extent this drop in price.

Table II.—Base prices (average price for 1890–1899), average yearly prices, and relative prices of commodities, 1890 to 1901, pages 456 to 473. This table shows for each commodity the base price (average price for the 10-year period, 1890–1899), the average price for each of the 12 years from 1890 to 1901, and the relative price for each year. The average price for each year was obtained, as has heretofore been explained, by dividing the sum of the quotations for each year as shown in Table I by the number of quotations for each year. The average price for the 10-year period, 1890 to 1899, was obtained by dividing the sum of the average prices of the 10 years by 10. This average price for 10 years has been adopted as the base for all relative prices. For the 10 articles which do not show prices for the entire period of 10 years, 1890 to 1899, the base in each case is the average of the years prior to and including 1899, and for imported tin plates the average of 1890 to 1898. In explanation of the term base or standard as used in connection with relative prices or index numbers, it may be stated that in reducing a series of actual prices to relative prices a base must first be chosen, and this may be either a single quotation, the average price for one year, or the average for two or more years. If the price for a single year is chosen, it is essential that that year be a normal one, for if prices are high in the year chosen for the base any subsequent fall will be unduly emphasized, while, on the other hand, if prices are low any subsequent rise will be emphasized. Upon examination of the prices involved in this compilation it was found that a normal condition as regards prices for all commodities was found in none of the years from 1890 to 1901. For this reason it was decided that an average price for a number of years would better reflect average or approximately normal conditions and form a more satisfactory base than would the price for any single year. The period chosen as this base was that from 1890 to 1899—a period of 10 years. The average price for the base period was found, as previously stated, by adding together the average prices for all of the 10 years and dividing by 10.

The relative prices as shown in this and succeeding tables have been calculated in the usual manner and represent simply the percentage which each yearly price is of the base price, as heretofore described. The average price for the first 10 years of the period, or the base,

method of accomplishing this having been found satisfactory in this always represents 100, and the percentages for each year enable the reader to measure readily the rise and fall, from year to year, of the prices of each single commodity, of any group of commodities, or of all the 261 commodities involved. These commodities are arranged in alphabetical order under each of the nine general groups as in Table I.

In order that the method pursued may be more readily understood, the reader is referred to the table itself as given on pages 456 to 473. Taking up the first commodity shown, barley, we find that the average price per bushel for the base period, 1890 to 1899, inclusive, was 45.34 cents; the average price for 1890 was 50.62 cents; that for 1891 was 60.98 cents; that for 1892, 50.85 cents, etc. The relative price for the base period, as heretofore explained, is always placed at 100 and is so given in the table. The relative price for 1890 is shown to be 111.6, or 11.6 per cent higher than the base or average for the 10 years. In 1891 the relative price reached 134.5, or 34.5 per cent above the base; in 1892 the relative price dropped to 112.2, or but 12.2 per cent above the base; in 1893 it dropped still further to 103.3, or but 3.3 per cent above the base; in 1894 it rose to 113.2, or 13.2 per cent above the base; in 1895 it dropped to 94.8, or 5.2 per cent below the base; in 1896 it reached the lowest point shown, 65.7, or 34.3 per cent below the base; from that point it gradually rose during the remaining years of the period, reaching 129.8 in 1901, or 29.8 per cent above the base. The figures in each case were secured according to the method already explained, that for 1890 being expressed as follows:

Average price for base period	\$0. 45 ³⁴
Average price for 1890 5062
Relative price for base period	100. 0
Relative price for 1890	111. 6

The remainder of the table may be analyzed in a similar manner.

The value of prices given in this relative form, it will readily be seen, consists in the means afforded for tracing and measuring the changes from year to year or from period to period, and in the combination of prices of a sufficient number of commodities to show the general price level. It should not be assumed that a system of relative prices of representative commodities will enable one to trace the causes of changes in the general price level or to determine the effect of such changes on any class of consumers or on all consumers. The use of such a system is to show the general course of prices from year to year of one commodity, of a group of commodities, or of all commodities.

No attempt has been made in any way to go into the causes of the rise and fall of prices. The aim has been to give the prices as they actually prevailed in the market. The relative prices or index num-

ERRATUM.

In Bulletin 39 of the Department of Labor, recently mailed to you, the first line on page 232 should appear as the last line on page 233.

bers must be accepted merely as showing the course of prices both of the individual articles and the market in general. The causes are too complex, the relative influence of each too uncertain, in some cases involving too many economic questions, to permit their examination in connection with the present article. It will be sufficient to enumerate some of the influences that have been mentioned as explaining the changes in prices. Such are: Variations in harvest, which not only restrict or increase the supply and consequently tend to increase or decrease the price of a commodity, but also restrict or increase, to a greater or less degree, the purchasing power of such communities as are dependent in whole or in part upon such commodity; changes in demand due to change in fashions, seasons, etc.; legislation altering internal-revenue taxes, import duties, or bounties; use of substitutes, as, for instance, an advance in the price of beef will cause an increased consumption of pork and mutton, and, it may be added, a probable increase in the price of both pork and mutton; improvements in methods of production which will tend either to give a better article for the same price or an equal article for a lower price; cheapening of transportation or handling; speculative manipulation of supply; commercial panic or depression; overproduction; organization or combination of mills or producers, thus enabling, on one hand, a greater or less control of prices or, on the other hand, economies in production or in transportation charges through the ability to supply the article from the point of production or manufacture nearest the purchaser. So far as individual commodities are concerned, no conclusion can safely be formed as to causes without an examination of the possible influence of several—in some cases perhaps all—of these causes. For example, the various internal-revenue and tariff acts have, in a marked degree, no doubt affected the prices of proof spirits, of tobacco, and of sugar. But, on the other hand, they have not been alone in their influences, and it probably would not in all cases be accurate to give the change of tax or duty as representing the measure of a certain and definite influence on the prices of those commodities.

It is important that the greatest care be exercised in the choice of the commodities in order that a simple average of their relative prices shall show a general price level. In the present compilation 261 commodities are shown, and it has been the aim of the Department to select only important and representative articles in each group. The number of articles included is larger than has heretofore been used in similar compilations, but the use of a large number of articles carefully selected minimizes the effect on the general price level of an unusual change in the price of one article or of a few articles. It will be seen that more than one series of prices has been given in the case of articles of great importance. This has been done for the purpose of giving due weight to these important commodities, no other

country. The same means have been employed by Mr. Sauerbeck in his English prices, as previously explained, and the approximate accuracy of the same, as an indication of the variation of prices, has been proved by various tests based on the amount of production, etc.

Various methods of weighting have been attempted in connection with previous compilations of relative prices. One method employed by European statisticians is to measure the importance of each commodity by its annual consumption by the entire nation, the annual consumption being found by adding to the home production the amount imported and subtracting the amount exported. The impossibility of securing even approximately accurate figures for annual consumption in the United States of the commodities included in this compilation renders this method unavailable here. The method employed in the Aldrich report consisted in giving to the various commodities or groups of commodities an importance based upon their consumption in normal families. There are, of course, many commodities whose importance can not be measured by this method. It has been thought best in the present series of index numbers, after a careful consideration of all methods of weighting, simply to use a large number of representative staple articles, selecting them in such a manner as to make them, to a large extent, weight themselves. Upon a casual examination it may seem that by this method a comparatively unimportant commodity, such, for instance, as cotton-seed meal, has been given the same weight or importance as one of the more important commodities, such as wheat. A closer examination, however, shows that cotton-seed meal enters into no other commodity under consideration, while wheat is not only quoted as the raw material, but enters into the two descriptions of wheat flour, the two descriptions of crackers, and the three descriptions of loaf bread.

Table III.—Relative prices of commodities, 1890 to 1901, pages 474 to 485.—This table is taken from Table II and shows the relative prices of each of the commodities included there. In this table similar commodities have been grouped, and the average of the relative prices shown for the commodities in each subgroup and in each of the nine general groups. The averages in all cases were found by dividing the sum of the relative prices by the number of commodities in the group under consideration. It should be borne constantly in mind that the term commodity is used here and elsewhere in a specific sense, “native” and “Western” sheep, for example, being considered different commodities. The method of securing average relative prices in this and other tables was as follows: The average relative price of cattle was found by adding the relative prices of the two grades of cattle and dividing the sum by 2. The average for hogs was found in the same manner and also the average for sheep. The average for live stock was found by dividing the sum of the relative prices of the two grades of cattle, the two grades of hogs, and the two grades of sheep

by 6, the total number of different descriptions of commodities or series of quotations in the live-stock group. The average relative prices of each of the nine general groups were found by dividing the sum of the relative prices of the different descriptions of commodities for each year by the number of these commodities or series of quotations considered in that year. The sum of the relative prices in 1890 of the commodities shown under the general group, "food, etc.," for example, is 5,958.2, which amount divided by 53, the number of different descriptions of commodities or series of quotations considered that year, gives 112.4 the average for the group "food, etc.," for 1890. For 1893 to 1901, 54 commodities are quoted in this group, and that number is accordingly the divisor for each of those years.

The average relative prices of each of the nine general groups for each year of the period, and the average relative prices of all commodities for each year, are shown in the following summary:

SUMMARY OF RELATIVE PRICES OF 261 COMMODITIES, 1890 TO 1901, BY GROUPS.

[Average price for 1890-1899 = 100.]

Year.	Farm-products.	Food, etc.	Cloths and clothing.	Fuel and lighting.	Metals and implements.	Lumber and building materials.	Drugs and chemicals.	House furnishing goods.	Miscellaneous.	All commodities.
1890	110.0	112.4	113.5	104.7	119.2	111.8	110.2	111.1	110.3	112.9
1891	121.5	115.7	111.3	102.7	111.7	108.4	103.6	110.2	109.4	111.7
1892	111.7	103.6	109.0	101.1	106.0	102.8	102.9	106.5	106.2	106.1
1893	107.9	110.2	107.2	100.0	100.7	101.9	100.5	104.9	105.9	105.6
1894	95.9	99.8	96.1	92.4	90.7	96.3	89.8	100.1	99.8	96.1
1895	93.3	94.6	92.7	98.1	92.0	94.1	87.9	96.5	94.5	93.6
1896	78.3	83.8	91.3	104.3	93.7	93.4	92.6	94.0	91.4	90.4
1897	85.2	87.7	91.1	96.4	86.6	90.4	94.4	89.8	92.1	89.7
1898	96.1	94.4	93.4	95.4	86.4	95.8	106.6	92.0	92.4	93.4
1899	100.0	98.3	96.7	105.0	114.7	105.8	111.3	95.1	97.7	101.7
1900	109.5	104.2	106.8	120.9	120.5	115.7	115.7	106.1	109.8	110.5
1901	116.9	105.9	101.0	119.5	111.9	116.7	115.2	110.9	107.4	108.5

In this table the average relative prices of farm products are based on 16 articles; of food, etc., on 53 articles from 1890 to 1892, and 54 from 1893 to 1901; of cloths and clothing, on 70 articles in 1890 and 1891, 72 in 1892, 73 in 1893 and 1894, 75 in 1895 and 1896, and 76 from 1897 to 1901; of fuel and lighting, on 13 articles; of metals and implements, on 37 articles from 1890 to 1893, 38 in 1894 and 1895 and from 1899 to 1901, and 39 from 1896 to 1898; of lumber and building materials, on 26 articles from 1890 to 1894, and 27 from 1895 to 1901; of drugs and chemicals, on 9 articles; of house-furnishing goods, on 14 articles; and of miscellaneous, on 13 articles. The average relative prices of all commodities are based on 251 articles in 1890 and 1891, on 253 in 1892, on 255 in 1893, on 256 in 1894, on 259 in 1895, on 260 in 1896 and from 1899 to 1901, and on 261 in 1897 and 1898.

A study of the table shows that the group of farm products reached the lowest average in 1896 and the highest in 1891; that of food, etc., the lowest in 1896 and the highest in 1891; that of cloths and clothing, the lowest in 1897 and the highest in 1890; that of fuel and lighting, the lowest in 1894 and the highest in 1900; that of metals and

implements, the lowest in 1898 and the highest in 1900; that of lumber and building materials, the lowest in 1897 and the highest in 1901; that of drugs and chemicals, the lowest in 1895 and the highest in 1900; that of house furnishing goods, the lowest in 1897 and the highest in 1890; while in the miscellaneous group the lowest average was reached in 1896 and the highest in 1890. The average for all commodities combined was the lowest in 1897 and the highest in 1890. Of the nine groups it is seen that one reached its lowest point in 1894, one in 1895, three in 1896, three in 1897, and one in 1898. The highest point was reached by three groups in 1890, by two in 1891, by three in 1900, and by one in 1901.

The average relative prices of the 250 commodities for which quotations were secured for the whole period involved do not differ materially from the average relative prices of all commodities shown in the above table. Eliminating the 11 commodities for which quotations could be secured for only a portion of the period, we find that the average relative price of the 250 commodities remaining was 112.9 in 1890, 111.7 in 1891, 106.0 in 1892, 105.4 in 1893, 95.9 in 1894, 93.5 in 1895, 90.3 in 1896, 89.6 in 1897, 93.2 in 1898, 101.4 in 1899, 110.1 in 1900, and 108.3 in 1901.

The following table shows for each of the nine general groups the relative prices of 1901 compared with the average of 1890 to 1899. Only those commodities have been included for which quotations were secured for the whole period of twelve years. The average price for 1890 to 1899 is in every case the base or 100 per cent. It should be kept in mind in using this table that the comparison is between the average prices for the base period and the prices for 1901, and while the majority of commodities show an increase in 1901 over this average for the period, in most cases a higher level of prices was reached in the earlier years of the period than is shown for 1901.

Table cutlery: knives and forks, cocobolo handles	107.3	Furniture: chairs, kitchen	124.2
Wooden ware: tubs, oak-grained	107.6	Glassware: nappies, 4-inch	125.0
Furniture: tables, kitchen	108.1	PRICE DECREASED.	
Earthenware: tea cups and saucers, white granite	109.7	Table cutlery: carvers, stag handles	93.8
Glassware: pitchers, $\frac{1}{2}$ -gallon, common ..	110.6	Average for house furnishing goods ..	
Earthenware: plates, cream-colored	112.5		110.9
Furniture: chairs, bedroom, maple	113.0		

Miscellaneous, 13 articles.

PRICE INCREASED.		PRICE INCREASED—concluded.	
Starch: laundry, large lump	104.3	Cotton-seed oil: summer yellow, prime ..	117.3
Malt: Western made	106.0	Tobacco: plug, Horseshoe, bright	117.6
Rubber: Para Island, fine	106.1	PRICE DECREASED.	
Tobacco: smoking, granulated, Seal of N.C	110.0	Paper: wrapping, manila	90.8
Jute: raw	111.4	Paper: news	75.6
Proof spirits	111.8	Average for miscellaneous	
Cotton-seed meal	113.9		107.4
Soap: castile, mottled, pure	115.1		
Rope: manila, $\frac{3}{4}$ -inch	116.9		

The most marked increase as well as decrease in prices is found in the food, etc., group, the relative price of currants in 1901, for example, being 221.6, as compared with the base period, and that of pepper

172.5, while the relative price of coffee is 49.2, of soda 51.2, and of nutmegs 54.3. In this group all meats (except mutton), sugar, eggs, and fresh vegetables show an increase, while wheat flour, butter, and coffee show a decrease. In the fuel and lighting group but one commodity, matches, shows a decrease in price. Georges Creek bituminous coal at the mine is represented by 150.5, while the same coal at New York, the consumers' market, is represented by 106.6, the difference being largely due, it is said, to the reduction in transportation charges. In the lumber and building materials group, window glass, American firsts, is represented by 191.9 and thirds by 180.4, while plate glass shows a decrease, one size being represented by 88.2 and the other by 94.4.

The facts presented in the above table are summarized in the following one, which shows the changes in prices of articles in each group, classified by per cent of change:

CHANGES IN PRICES OF ARTICLES IN EACH GROUP, CLASSIFIED BY PER CENT OF CHANGE, 1901 COMPARED WITH AVERAGE PRICE FOR 1890-1899.

Groups.	Num-ber of arti-cles.	Price increased.					Price same as base.	Price decreased.			
		100 per cent or more.	50 to 100 per cent.	25 to 50 per cent.	10 to 25 per cent.	Less than 10 per cent.		Less than 10 per cent.	10 to 25 per cent.	25 to 50 per cent.	50 per cent or more.
Farm products	16	6	5	1	3	1
Food, etc	53	1	1	6	10	16	7	8	3	1
Cloths and clothing	70	1	8	31	1	23	4	2
Fuel and lighting	13	1	2	7	2	1
Metals and implements	36	4	18	6	2	2	3	1
Lumber and building mate-rials	26	3	4	6	7	5	1
Drugs and chemicals	9	3	1	4	1
House furnishing goods	14	1	6	6	1
Miscellaneous	13	8	3	1	1
Total	250	1	5	27	69	76	3	43	18	7	1

It is seen in the above comparison of the prices of 1901 with the average for 1890 to 1899, that of the 16 articles in the farm products group, 12 show an increase and 4 a decrease; of the 53 in the food, etc., group, 34 show an increase and 19 a decrease; of the 70 in the cloths and clothing group, 40 show an increase, 1 shows the same price as the average for the base period, and 29 show a decrease; of the 13 in the fuel and lighting group, 12 show an increase and 1 a decrease; of the 36 in the metals and implements group, 28 show an increase, 2 show the same price as the average for the base period, and 6 show a decrease; of the 26 in the lumber and building materials group, 20 show an increase and 6 a decrease; of the 9 in the drugs and chemicals group, 8 show an increase and 1 a decrease; of the 14 in the house furnishing goods group, 13 show an increase and 1 a decrease; of the 13 in the miscellaneous group, 11 show an increase and 2 a decrease. Of the 250 commodities, 178 show an increase, 3 show the same price as the average for the base period, and 69 show a decrease.

The per cents of increase and decrease are also shown in this table in classified form. Of the 178 commodities that showed an increase in 1901 over the average for 1890 to 1899, 76 advanced less than 10 per cent, 69 advanced from 10 to 25 per cent, 27 advanced from 25 to 50 per cent, 5 advanced from 50 to 100 per cent, and 1 advanced 100 per cent or more. Of the 69 commodities which showed a decrease, 43 decreased less than 10 per cent, 18 decreased from 10 to 25 per cent, 7 decreased from 25 to 50 per cent, and 1 decreased 50 per cent or more.

The number and per cent of articles which showed each specified increase or decrease are given in the following table:

NUMBER AND PER CENT OF COMMODITIES WHICH CHANGED IN PRICE IN 1901 AS COMPARED WITH AVERAGE PRICE FOR 1890-1899.

	Number of articles.	Per cent of articles.		Number of articles.	Per cent of articles.
Price increased:			Price decreased:		
100 per cent or more.....	1	0.4	Less than 10 per cent....	43	17.2
50 to 100 per cent.....	5	2.0	10 to 25 per cent.....	18	7.2
25 to 50 per cent.....	27	10.8	25 to 50 per cent.....	7	2.8
10 to 25 per cent.....	69	27.6	50 per cent or more.....	1	.4
Less than 10 per cent....	76	30.4			
Total	178	71.2	Total	69	27.6
Price same as base.....	3	1.2	Grand total.....	250	100.0

Of the 250 articles, it is seen that 178, or 71.2 per cent, show an increase in price; 3 articles, or 1.2 per cent, show the same price as the average for the base period, and 69 articles, or 27.6 per cent, show a decrease in price in 1901, as compared with the average price for the base period.

The following table shows the relative prices of certain related articles, so grouped as to render easy a comparison of the course of their prices during the period:

This table shows for all of the 6 articles grouped under cattle and cattle products (cattle, fresh beef, beef hams, mess beef, tallow, and hides) an advance in price in 1891, but not in the same degree; in 1892, a decline in all of the articles in this group; in 1893, an increase, except for hides, for which there was a further decline in the relative price; in 1894, a decline, except for beef hams, which increased; in 1895, an increase, except for beef hams and tallow; in 1896, a decline in all of the articles; in 1897, an increase, except for tallow; in 1898, an increase for all of the articles, except beef hams; in 1899, an increase for all; in 1900, a decline, except for mess beef and tallow, and in 1901, an increase for cattle, tallow, and hides, and a decline for fresh beef, beef hams, and mess beef. The facts for other related groups may be seen by reference to the table.

General tables I, II, and III follow.

TABLE I.—WHOLESALE PRICES OF COMMODITIES, 1890 TO 1901.

FARM PRODUCTS.

BARLEY: By sample.

[Price per bushel in Chicago, weekly range. From January, 1890, to October, 1897, the prices are for No. 3, and from November, 1897, to December, 1901, for choice to fancy. Quotations from the annual reports of the Chicago Board of Trade.]

RECENT REPORTS OF STATE BUREAUS OF LABOR STATISTICS.

WISCONSIN.

Ninth Biennial Report of the Bureau of Labor and Industrial Statistics, 1898-99. Halford Erickson, Commissioner. xxx, 1141 pp.

This report consists of seven parts: Laws of Wisconsin relating to labor, 114 pages; synopsis of the reports of the bureau of labor of Wisconsin, 147 pages; child labor, 144 pages; manufacturing statistics for 1897-98, 137 pages; manufacturing statistics for 1898-99, 164 pages; employment and earnings in various industries in 1898, 130 pages; factory inspection, 302 pages.

CHILD LABOR.—This part of the report opens with a general review of child labor in England and in the United States since the beginning of the factory system. Conditions in Wisconsin are then considered in detail in the results of an inquiry into child labor in 1898 and 1899, conducted through the factory inspectors. The inquiry relates to the condition of employment, nativity, age, education, and earnings of children, proportion of children employed to total employees, occupations of parents, earnings of families whose children were employed, etc.

In these investigations 290 establishments were visited. These employed 44,056 persons, of whom 4,756, or 10.80 per cent, were 16 years of age or under, and of these 456, or 1.04 per cent of the whole number, were under 14 years of age. As 14 years is the minimum age at which children may be legally employed, these 456 children were dismissed when the facts were ascertained. Of the 4,756 children under 16 years of age, 3,021, or 63.52 per cent, were males, and 1,735, or 36.48 per cent, were females. The average wages paid these children were \$2.66 per week. Of the 4,756 children considered, 4,747 had attended school at some time, and 9 had not; 4,704 lived with their parents, 46 with relatives, and 6 were boarding. Of 2,495 children questioned, 1,540, or 61.72 per cent, reported that the father was employed, and 955, or 38.28 per cent, reported that he had no employment at the time. Of 2,615 children reporting, 1,324, or 50.63 per cent, stated that their families owned their homes, and 1,291 that they paid rent. Of 4,756 children reporting, 3,634 stated that their fathers were laborers, and 1,122 that they were skilled workmen.

There were 381 families investigated because children belonging to them were either under the legal age limit for such employment or appeared to be very young for the nature of their work. The average size of these families was 7.3 persons, of whom an average of 2.8 were working for wages. In 152 families there were 3 wage-earners; in 68 there were 4; in 18 there were 5, and in 1 there were 6, including the father. The average yearly earnings per family were \$593.94, of which the father earned \$341.77, or 57.54 per cent, and the other members of the family \$252.17, or 42.46 per cent. Of 250 families questioned, the average age of the head of the family was 47.7 years. The heads of the families were employed an average of 225.35 days, and the other members 220.69 days per year.

The investigation also covered returns from employers giving their opinions regarding the effects of the enforcement of the child labor law. (a)

MANUFACTURES.—These statistics are given in two series, one showing returns for identical establishments for 1897 and 1898, and the other for identical establishments in 1898 and 1899. While the returns do not cover all establishments in the State, they include the greater portion of them. For the first series, these statistics are based upon returns from 1,245 establishments for some items, and 1,499 establishments for others. In the second series all the statistics are based upon returns from 992 establishments. The following tables give a summary of the statistics for the two series:

STATISTICS OF MANUFACTURES, 1897 AND 1898.

[The figures showing number of private firms, corporations, partners, stockholders, capital invested, cost of stock used, and value of goods made are based upon returns from 1,245 establishments; the other figures are based upon returns from 1,499 establishments.]

Items.	1897.	1898.	Increase.

Value of goods made.....	\$158,258,747	\$178,692,705	\$20,433,958	12.91
Total wages paid	\$25,921,041	\$29,519,468	\$3,598,427	13.88
Average yearly earnings per employee.....	\$383.95	\$389.14	\$5.19	1.35
Average days in operation	278.40	281.90	3.50	1.26
Average proportion of business done.....	75.60	81.20	5.60	7.41

a Decrease.

The figures given in the first table, for 1897 and 1898, show an increase in all the items except the number of private firms and the number of partners, which show a decrease. The figures in the second table, for 1898 and 1899, show an increase in all the items except the number of private firms.

EMPLOYMENT AND EARNINGS.—In this part of the report statistics are given showing the number of employees and their earnings in the manufacturing, mercantile, mining, quarrying, and logging industries, skilled trades, and coal and wood handling. Following is a summary of the statistics given:

WEEKLY EARNINGS IN SPECIFIED INDUSTRIES.

Industries.	Persons em- ployed.	Per cent of employees receiving—				
		\$9 per week or over.	\$7 per week or over.	\$6 per week or over.	\$5 per week or over.	Under \$5 per week.

Logging and driving.....	12,780	100.00

RECENT FOREIGN STATISTICAL PUBLICATIONS.

BELGIUM.

Les Salaires dans l'Industrie Gantoise: I. Industrie Cotonnière. Office du Travail, Ministère de l'Industrie et du Travail. 1901. xiv, 213 pp.; appendices, 596 pp.

The present volume, which relates to the cotton industry, is the first of a series of reports to be published by the Belgian bureau of labor on wages paid in the industries of Ghent. The information was obtained and compiled by an agent especially appointed to conduct the work according to plans prepared by the bureau.

This extensive work consists of two parts, the first being an analysis in text form of the information secured and the second being devoted exclusively to statistical tables. The first part contains a history of the cotton industry of Ghent, a review of the wages paid and hours of labor during the nineteenth century and at the present time, and an account of unemployment in Ghent. Several chapters are devoted to the discussion of wages paid in individual occupations in the cotton spinning, cotton and linen weaving, and bleaching, dyeing, and printing industries of Ghent, wages paid in foreign countries, age of employees, duration of employment, family earnings, and cost of living. The appended tables contain extracts of wage statistics in the cotton industry of Ghent from 1802 to 1898, compiled from all available sources; data relating to hours of labor from 1889 to 1898; statistics of unemployment and wage data published in foreign countries. Each extract is presented separately and the source is given in every case. Graphic charts are also shown.

FRANCE.

Résultats statistiques du Recensement des Industries et Professions. (Dénombrement général de la population du 29 Mars, 1896.) Direction de l'Office du Travail, Ministère du Commerce, de l'Industrie, des Postes et des Télégraphes. Volume I, iii, 845 pp.; Volume II, 803 pp.; Volume III, cix, 633 pp.; Volume IV, cxxviii, 440 pp.

In these four volumes are presented the returns of the French census of industries and occupations taken on March 29, 1896. Volume I contains the introductory part and shows the methods employed in taking the enumeration and presenting the results, copies of schedules used, instructions given, reports, official orders, and other documents, a classification and alphabetical list of industries and occupations, and copies of enumeration schedules used in other countries. Part of Volume I and Volumes II and III contain the detailed returns—the first for 15 departments in northern and eastern France, the second for 27 departments in southeastern France, and the third for 45

departments in central and western France. Volume IV gives the general results for the whole of France, showing the total population engaged in gainful occupations on March 29, 1896.

The population of France as enumerated on that date was composed as follows: Population engaged in gainful professional or industrial occupations, 18,467,338; population engaged in occupations in foreign countries, 4,515; population engaged in gainful, but other than professional or industrial occupations, 1,027,918; population not engaged in gainful occupations, 18,769,240; total population, 38,269,011. (a)

The present report deals only with the first-mentioned class—those persons engaged in gainful professional or industrial occupations. This class includes 18,467,338, or 48 per cent of the entire population of France. For each industry the occupations are grouped under four classes, namely, proprietors and managers of establishments (*chefs d'établissements*), salaried employees and wage workers in establishments (*employés et ouvriers des établissements*), proprietors and wage workers working alone on their own account (*travailleurs indépendants*), and persons belonging to the class of salaried employees and wage workers who are out of employment (*employés et ouvriers sans emploi*).

In the following table this part of the population is classified according to the principal industry and occupation groups:

POPULATION OF FRANCE ENGAGED IN GAINFUL PROFESSIONAL OR INDUSTRIAL OCCUPATIONS ON MARCH 26, 1896.

Occupations and industries.	Proprietors and managers of establishments.	Salaried employees and wage workers in establishments.	Proprietors and wage workers working alone.	Persons out of work. (b)	Position not reported.	Total.
Fisheries.....	13, 451	23, 981	29, 165	630	4, 399	71, 626
Forestry and agriculture	3, 072, 747	3, 260, 253	2, 016, 948	37, 934	42, 177	8, 430, 059
Mining and quarrying.....	6, 437	209, 054	8, 636	1, 883	805	226, 815
Manufacturing and mechanical pursuits	687, 234	2, 936, 882	1, 505, 866	131, 313	117, 074	5, 378, 369
Transportation and handling.....	20, 962	587, 730	45, 278	37, 194	21, 447	712, 611
Commercial and banking pursuits and hotel, restaurant, and theatrical establishments and agencies	430, 542	639, 458	479, 185	26, 584	28, 048	1, 603, 817
Professional pursuits	36, 039	161, 368	122, 715	3, 531	15, 523	339, 176
Personal and domestic service.....	14, 090	794, 967	80, 010	18, 818	61, 179	969, 064
State or communal service	688, 499	594	689, 093
Not reported.....	345	21, 854	4, 399	10, 990	9, 120	46, 708
Total.....	4, 281, 847	9, 324, 046	4, 292, 202	269, 471	299, 772	18, 467, 338

a This total includes only such persons as were actually in France on the night of March 28-29, 1896, while the population usually given for France for 1896, namely, 38,517,975, includes also persons resident in France but temporarily absent at the time of the enumeration.

b Including only persons belonging to the class of salaried employees and wage workers.

Of the 18,420,630 persons whose occupations were known, 45.77 per cent were engaged in forestry and agriculture, 29.20 per cent in manufacturing and mechanical pursuits, 8.70 per cent in commerce, banking, etc., 5.26 per cent in personal and domestic service, 3.87 per cent in transportation and handling, 3.74 per cent in the state and communal services, 1.84 per cent in professional pursuits, 1.23 per cent in mining and quarrying, and 0.39 per cent in the fisheries.

Of the 18,167,566 persons the status of whose employment was reported, 23.57 per cent were proprietors and managers of establishments, 51.32 per cent were salaried employees and wage workers in establishments, 23.63 per cent were proprietors and workmen working alone, and 1.48 per cent were persons belonging to the class of salaried employees and wage workers, but who were out of work on March 29, 1896.

Of the 18,467,338 persons engaged in gainful industrial and professional occupations, the sex of 23,559 was not reported. Of the others, 12,061,121, or 65.39 per cent, were males, and 6,382,658, or 34.61 per cent, were females.

The average age of persons engaged in gainful occupations in the principal groups of industries is shown in the following table:

AVERAGE AGE OF PERSONS ENGAGED IN GAINFUL OCCUPATIONS IN THE THREE PRINCIPAL GROUPS OF INDUSTRIES.

Industries.	Males.				Females.			
	Proprietors and managers of establishments.	Salaried employees and wage workers in establishments.	Proprietors and wage workers working alone.	Persons out of work. (a)	Proprietors and managers of establishments.	Salaried employees and wage workers in establishments.	Proprietors and wage workers working alone.	Persons out of work. (a)
Agriculture and forestry.....	50	29	48	43	46	29	49	40
Manufacturing, mining and quarrying, transportation and handling.....	45	34	45	40	40	31	37	35
Commerce, banking, etc., and personal service	44	33	45	34	42	29	46	35

a Including only persons belonging to the class of salaried employees and wage workers.

A new feature of the present census of occupations and industries is the collection and tabulation of data regarding the unemployed. This includes only persons belonging to the class of salaried employees and wage workers who were out of work on March 29, 1896. The following table gives the number of persons out of work, classified according to age groups and causes of unemployment:

CAUSES OF UNEMPLOYMENT IN FRANCE ON MARCH 29, 1896.

Cause of unemployment.	Persons.				
	24 years or under.	25 to 64 years.	65 years or over.	Age not reported.	Total.
Sickness or invalidity	14, 556	48, 625	10, 949	6, 469	80, 599
Dullness of season	17, 619	40, 095	2, 866	3, 564	64, 144
Inability to secure work for other reasons	17, 367	39, 038	2, 322	3, 725	62, 452
Not reported	15, 438	38, 762	2, 597	5, 610	62, 407
Total	64, 980	166, 520	18, 734	19, 368	269, 602

Of 207,195 persons, the cause of whose unemployment was reported, 38.90 per cent were out of work on account of sickness or invalidity, 30.96 per cent on account of dullness of season, and 30.14 per cent on account of inability to secure work for other reasons. Of 250,234 reporting age, 25.97 per cent were 24 years of age or under, 66.55 per cent were between the ages of 25 and 64 years, and 7.48 per cent were 65 years of age or over. Of those 65 years of age or over whose age and cause of unemployment were reported, over two-thirds were out of work on account of sickness or invalidity.

In enumerating establishments, all cases were included where two or more persons were working together, either as coworkers or as employers and employees. The following table shows the number of establishments in each group of industries, classified according to the number of employees in each:

ESTABLISHMENTS IN FRANCE ON MARCH 26, 1896.

Occupations and industries.	Total establishments.	Establishments having—					Establishments not reporting employees.
		No employees.	1 to 10 employees.	11 to 100 employees.	101 to 1,000 employees.	Over 1,000 employees.	
Fisheries	11, 430	866	9, 664	108	2	790
Forestry and agriculture	1, 970, 290	480, 715	1, 464, 770	10, 154	31	14, 620
Mining and quarrying	6, 939	253	5, 412	1, 023	141	43	67
Manufacturing and mechanical pursuits....	614, 968	37, 413	534, 008	31, 446	3, 255	94	8, 752
Transportation and handling	19, 917	1, 013	15, 907	1, 113	71	6	1, 807
Commercial and banking pursuits, and hotel, restaurant, and theatrical establishments and agencies	309, 046	71, 470	214, 860	6, 238	133	10	16, 335
Professional pursuits	37, 434	847	31, 426	2, 523	74	2, 564
Personal and domestic service	12, 610	571	11, 852	31	156
State or communal service	110	29	22	44	14	1
Not reported	270	78	181	11
Total	2, 983, 014	593, 226	2, 288, 109	52, 658	3, 751	167	45, 103

NETHERLANDS.

Verslagen der Kamers van Arbeid over 1900. 252 pp. (Published by the Ministry of Waterstaat, Commerce, and Industry.)

This is the second annual compilation of the reports made by the local councils of labor established by royal decree in accordance with an act passed May 2, 1897. (*a*) According to regulations made in pursuance of this law, each council is required to make a report to the ministry of waterstaat, commerce, and industry on or before April 1 of each year, showing the membership, names of officers, and number of meetings held, and giving a review of labor conditions, a statement of the advice given and of the authorities advised, copies of agreements or regulations made, information regarding labor disputes brought to the attention of the councils, the proceedings of boards of conciliation whenever appointed, etc.

The present compilation of these reports includes tabular statements showing, for each council reporting, the date of organization, the location and membership of the council, the industries represented, the number of employers and employees on the voting list, the number who voted at the last election, the number of meetings held by the councils and by the governing boards, and other information. The tabular statements are followed by extracts in text form from individual reports of 45 councils, covering a wide range of topics. On January 1, 1901, 79 councils had been authorized by royal decree, of which 58 had been organized. Of these 47 reported to the ministry, 22 making returns for the first time.

a For an account of this law, showing the purposes, organization, etc., of these councils of labor, see Bulletin No. 30, pp. 1046-1051.

DECISIONS OF COURTS AFFECTING LABOR.

[This subject, begun in Bulletin No. 2, has been continued in successive issues. All material parts of the decisions are reproduced in the words of the courts, indicated when short by quotation marks, and when long by being printed solid. In order to save space, matter needed simply by way of explanation is given in the words of the editorial reviser.]

DECISIONS UNDER STATUTORY LAW.

CIVIL SERVICE—REMOVAL OF HONORABLY DISCHARGED SOLDIER—CONSTITUTIONALITY OF STATUTE—*Stutzbach v. Coler, Court of Appeals of New York, 61 Northeastern Reporter, page 697.*—In this case it appeared that the relator, Stutzbach, was an employee in the department of finance of New York City, and that, on a reduction of the appropriation for that department, Coler, city comptroller, was compelled to dismiss a number of employees. Fourteen men were selected for dismissal, among whom was Stutzbach, who was a veteran of the civil war, of which latter fact the comptroller was ignorant. Chapter 370, sec. 21, acts of 1899, provides that “no person holding a position [in the civil service] by appointment or employment * * * who is an honorably discharged soldier * * * shall be removed from such position or employment, except for incompetency or misconduct shown after a hearing, upon due notice, upon stated charges, and with the right to such employee or appointee to a review by a writ of certiorari.”

Under this law Stutzbach applied for a peremptory writ commanding his reinstatement. This was denied in special term, and the question was taken to the appellate division, which reversed the court below, giving Stutzbach his position. Defendant Coler then brought the case to the court of appeals of New York. Further facts appear in the remarks of Chief Justice Parker, who delivered the opinion of the court, from which the following is quoted:

Lack of information justified the act of the comptroller in attempting to discharge him [Stutzbach]; but, if his removal was illegal because he was a veteran, it became the duty of the comptroller, when the fact came to his knowledge, to reinstate the relator.

* * * The purpose of this proceeding is to compel reinstatement, which we think the relator is entitled to, provided his removal was not in compliance with the law. Stated charges were not made against this relator for incompetency or misconduct, and a hearing

given to him thereon upon due notice; and hence his removal was, according to the letter of the statute, illegal. The comptroller's return to the writ indicates that he was selected for discharge because he was the least competent man in his bureau, but it is not a sufficient compliance with the statute to discharge a man for incompetency. Before the dismissal takes place, the charge of incompetency must be made, notice given, and the hearing had.

It is now urged that, in so far as the statute extends preference of veterans beyond that accorded to them by the constitution, it is void. The constitution only provides for a preference of veterans in appointments and promotions in the civil service within the State, and does not, in terms or otherwise, provide that they shall be continued in the public service in preference to other appointees; and the contention is that the legislature can not go further and give a preference beyond that declared in the constitution. * * * Now while the legislature can not enact laws repugnant to this provision of the constitution, it may legislate further in that direction from time to time, if in its judgment it shall seem wise to do so. And so it was within its power to place a limit upon the removal of persons employed in the public service, as it has done by section 21.

Reinstatement should be affirmed with costs.

RAILROAD COMPANIES—PAYMENT OF WAGES TO DISCHARGED EMPLOYEES—PENALTY FOR NONPAYMENT WHEN DUE—*Fordyce et al. v. Gorey*, *Supreme Court of Arkansas*, 65 *Southwestern Reporter*, page 429.—Gorey brought suit in the circuit court of Polk County to recover wages due him by Fordyce & Withers, receivers of the Kansas City, Pittsburg and Gulf Railway Company, and to assess the penalty accruing under the statute. Section 6243, Sand. & H. Dig. (1894), provides that wages of discharged employees of railroad companies shall be due and payable on the day of their discharge, and if not then paid, as a penalty for nonpayment, the wages of such employees shall continue at the same rate until paid. Gorey was the conductor of a train in charge of the receivers, and as such had collected certain sums of money which should be paid over to the said receivers, but the amount of money so due was in dispute. Instruction No. 2 for the plaintiff was as follows: "If the jury find from the evidence that the plaintiff is entitled to a penalty in this case, then in that event he will be entitled to said penalty from the date of his discharge up to the date of the filing of the defendants' answer in this case." The jury awarded the penalty from date of discharge, and on exception to the above instruction the case came to the supreme court, which reversed the judgment and directed a new trial.

Judge Hughes, in delivering the opinion of the court, said:

We think there is reversible error in the second instruction set out herein, because there had been no ascertainment of the plaintiff's shortage, and consequently the amount which the railroad company owed him had not been, and could not have been, ascertained at the time of his

discharge by the receivers; and this seems to have been his fault. The receivers, therefore, were not liable to a penalty for failure to pay his wages until they knew what was due him, or could by the exercise of reasonable diligence have ascertained the same, for failure to pay his wages after which time only the penalty would attach, and not from the time of his discharge. This is a penal act, and should be strictly construed.

STRIKES—INJUNCTION—ENTICING APPRENTICES—CONSTRUCTION OF STATUTE—*Southern Railway Company v. Machinists' Local Union No. 14 et al.*, *United States Circuit Court for the Western District of Tennessee*, *111 Federal Reporter*, page 49.—In this case the above-named labor union went on strike in obedience to orders from a central organization. The union established and maintained pickets around the shops of the railway company, and its members climbed telephone poles and fences to watch such shops; gathered in numbers at the entrances, and sent abusive and threatening messages to workmen inside. They thrust themselves upon unwilling workmen to argue and persuade, and in some instances personal assaults were made upon such workmen by strikers or their friends.

A statute of Tennessee (Acts 1875, chap. 93) provides "that hereafter it shall not be lawful for any person in this State knowingly to hire, contract with, decoy, or entice away, directly or indirectly, anyone, male or female, who is at the time under contract or employ of another." Counsel for the labor union maintained that this statute applied to farm laborers only, and that it did not apply to the act of the union's committee appointed for the purpose of persuading the railroad company's apprentices to break their contracts and leave its service.

The company petitioned for an injunction against the continuance of the acts above named. In granting the injunction, Judge Hammond used in part the following language:

If the picketing, the climbing of the adjacent telephone poles, the climbing upon the fences, the watching of the shops, the assemblies in the streets and at the entrances and the constant and unceasing surveillance had been confined to obtaining information and to unobjectionable social intercourse, for the purpose of begging and entreating not to work, there could be no injunction. But the thrusting themselves upon unwilling "scabs" to "argue;" "persuading," picketing, climbing poles and fences, as an exhibition of force and threats, accompanied by such assaults as have been mentioned; violent, abusive, and threatening messages sent to "scabs" inside, and the like, as shown in this proof, come clearly within the decisions against such conduct.

The strikers can not have, under the law of equal rights, a liberty of contracting as they please, working when they please, and quitting when they please, which does not belong alike to the "scabs" and their employers. And it is this right the courts of equity enforce by injunction. The Supreme Court of the United States has established that as the law of this case.

Referring to the defendant's contention that the statute cited above applies only to enticing farm laborers, the court said:

This nowhere appears on the face of the statute, or otherwise in any other way than as an inference to be drawn from what counsel and the court know of the political and industrial conditions of this section of the country. If a legislature intends to limit its enactment, they must do so by the terms of the act itself, and no other limitation is authoritative where the language is unambiguous and construes itself.

DECISIONS UNDER COMMON LAW.

CARRIERS—INJURY TO EMPLOYEE ON SLEEPING CAR—CONTRACT LIMITING LIABILITY—*Russell v. Pittsburg, Cincinnati, Chicago and St. Louis Railway Co., Supreme Court of Indiana, 61 Northeastern Reporter, page 678.*—In this case the plaintiff, Russell, was a porter on a Pullman sleeping car. A door or other object projecting from a train on a side track struck and injured the plaintiff while the train on which he was riding was moving rapidly over the main track.

The road and both trains were under the control of the above-named railroad company, the Pullman car on which Russell was employed being carried under special contract. In the superior court of Marion County suit was brought against the company to recover damages for the injury so inflicted, and judgment was rendered in its favor, whereupon the plaintiff appealed.

The answer of the railroad company alleged, in its second paragraph, that the Pullman Palace Car Company, among other agreements made in its contract, had promised to indemnify the railroad company for any liability arising against it for any personal injury, death, or otherwise of any employee of the Pullman Company, such employees to be carried by the road free of charge.

The answer further alleged that at the time of the accident the appellant, Russell, was being hauled in the car of which he had charge as porter in compliance with the terms of the contract above referred to; and that prior to receiving the injury he had himself agreed in writing with the Pullman Company, for himself, his heirs, and legal representatives, to assume all risks of accident or casualties, by railroad travel or otherwise, incident to such employment and service, and to release the Pullman Company from all claims for liability of any nature or character whatsoever on account of any personal injury or death in such employment and service.

A clause of like tenor released from liability all transportation companies over whose lines the cars of the Pullman Company might operate.

The third paragraph of the answer repeated much the same facts, introducing no new matter.

Both these paragraphs were demurred to, and the demurrers overruled. The appellant assigns for error the overruling of these

demurrers, which, as involving the same questions, were considered together.

In giving the opinion of the court, Judge Dowling said:

The principal question here presented is whether a contract between a palace car company and a porter having charge of one of its sleeping cars is invalid in so far as it attempts to exempt transportation companies over whose lines the coaches of the palace car company are being run from all liability arising from their negligence and the negligence of their servants, and whether such contract may be pleaded in bar of an action by such porter against a transportation company for an injury caused wholly by the latter's negligence.

The court here stated the rule of law that a common carrier of goods and passengers can not by contract secure release from liability for injuries resulting from its own negligence, and continued:

The appellant did not occupy the position of an ordinary passenger upon appellee's train. He was not being carried upon any journey from one point to another, nor was his presence incidental to the shipment of goods which the carrier was bound to accept. He occupied the sleeping car as a part of his employment with the Pullman Company. In no sense was the appellee bound to accept the appellant upon its trains solely because he accompanied a palace car tendered by the Pullman Company, for the obvious reason that the carrier was under no legal obligation to accept and haul the sleeping car itself.

The court concluded that "the appellee could under these circumstances contract specially for a release from all liability for negligence toward appellant."

As to Russell's claim that inasmuch as the railroad company was not a party to the contract entered into between himself and the Pullman Company, it could receive no benefit from it, it was said:

The contract referred generally to transportation companies over whose lines the Pullman Company should run its cars. This comprehended the appellee, and, as the contract was prima facie for the benefit of the appellee, it will be presumed to have accepted its provisions, and it may now claim its advantages, as one in whose interest the agreement was executed.

The judgment is affirmed.

CONSPIRACY—BLACKLISTING—*Trimble v. Prudential Life Insurance Co. of America, Court of Appeals of Kentucky, 64 Southwestern Reporter, page 915.*—This was an action by D. L. Trimble against the above-entitled company to recover damages for a conspiracy to prevent plaintiff, Trimble, from receiving employment. In the circuit court of Fayette County, Ky., where the case was heard, a judgment was rendered for the defendant insurance company, and the plaintiff appealed the case to the court of appeals of the State, which rendered its decision October 29, 1901, and affirmed the action of the lower court.

Judge Hobson delivered the opinion of the court of appeals, which reads as follows:

The petition in this case is substantially the same as that in the case of *Baker v. Insurance Co.*, 64 S. W. 913, [See this page, below], this day decided, except that in this case it is charged that appellant [Trimble] applied to the Sun Life Insurance Company and the Metropolitan Life Insurance Company for employment, and was refused by these companies by reason of the agreement not to employ one who had been discharged by the Prudential. Damages are prayed against the Prudential for preventing his employment by the other two companies. The Sun Life and Metropolitan Companies had the right to employ or not to employ any applicant as they pleased. The alleged agreement that neither of them would employ one who had been discharged by either of the other two was contrary to public policy, and not obligatory. The refusal of the two companies to employ applicant was therefore their voluntary act. It violated no legal right of his, and, under the principles laid down in the case referred to, he has no cause of action. Judgment affirmed.

CONSPIRACY — BLACKLISTING — PROCURING DISCHARGE — *Baker v. Metropolitan Life Insurance Co.*, *Court of Appeals of Kentucky*, 64 *Southwestern Reporter*, page 913.—This was an action by George T. Baker against the above-entitled company to recover damages for the act of the defendant company in discharging plaintiff, Baker, from its employment pursuant to a conspiracy with others for that purpose. The plaintiff's petition, filed in the circuit court of Fayette County, Ky., where the action was brought, stated, among other particulars, that the business of the plaintiff was and had been that of a solicitor of life insurance; that for five years he had been in the employ of the Sun Life Insurance Company of America, and that he was discharged from said employment on January 7, 1899; that in February he was employed by the defendant, the Metropolitan Life Insurance Company, and was discharged by said company during the same month at the instance and demand of the Sun Life Insurance Company, his former employer; that the Sun Life Insurance Company, the Metropolitan Life Insurance Company, and the Prudential Life Insurance Company had confederated together for the purpose of preventing any one who had been in the employ of either of said insurance companies from receiving employment from either of said insurance companies for the period of two years after leaving the company by which he had been formerly employed. To this petition the defendant insurance company filed a general demurrer, which was sustained by the circuit court, and the petition was dismissed. The plaintiff, Baker, then appealed the case to the court of appeals of the State, which rendered its decision October 29, 1901, and affirmed the action of the lower court.

Judge Hobson delivered the opinion of the court of appeals and, in the course of the same, he used the following language:

It will be observed that the plaintiff alleges that his employment was for an indefinite length of time. He had, therefore, the right to quit whenever he saw proper. The defendant had also the right to terminate the employment at pleasure. When it discharged him, therefore, it exercised only a legal right. But it is insisted that the gist of the action is not a breach of the contract, but the conspiracy, which resulted in the damage to appellant. This precise question was determined by this court in *Brewster v. Miller*, 101 Ky. 368, 41 S. W. 301. In that case the undertakers of Louisville entered into an agreement not to accept employment from a person who was indebted to one of them. Miller refused to serve Brewster because he was indebted to them [him] for previous service. The other defendants refused for the reason that he had not paid Miller. Brewster sued for damages, and it was held that he could not recover. The court said: "We think Mr. Addison lays down the correct rule in his work on Torts, when he says, in section 850, vol. 2: 'A criminal proceeding by way of indictment lies for the mere act of conspiring, but a civil action is not maintainable unless the plaintiff has been aggrieved or has sustained actual legal damage by some overt act done in pursuance of the conspiracy.' * * * One has the right to decline to enter into a business undertaking with any one."

"It is a part of every man's civil rights that he be left at liberty to refuse business relations with any person whomsoever, whether the refusal rests upon reason or is the result of whim, caprice, prejudice, or malice. With his reasons neither the public nor third persons have any legal concern." (Cooley, Torts, § 238.) This case followed *Bourlier v. McCauley*, 91 Ky. 135, 15 S. W. 60, 11 L. R. A. 550, 34 Am. St. Rep. 171, where the court said: "Whether a legal wrong has been done or not depends upon the nature and quality of the act, and not upon the motive of the person doing it." Where falsehood or coercion is employed to secure a discharge or prevent an employment, a different rule applies. Judgment affirmed.

CONSPIRACY—BLACKLISTING—PROCURING DISCHARGE—*Baker v. Sun Life Insurance Company*, Court of Appeals of Kentucky, 64 *Southwestern Reporter*, page 967.—Suit was brought in the circuit court of Fayette County to recover damages from the above-named company, charging conspiracy for the purpose of procuring the discharge of the plaintiff, Baker, from his employment by another company. From an adverse judgment the plaintiff appealed.

In affirming the action of the court below Judge Hobson said in part:

A party to a contract can not maintain an action against a person who has maliciously advised and procured the other party to break it, unless the person procuring the breaking of the contract did so by coercion or deception, and thus caused the party to break the contract against his will, or contrary to his purpose.

CONSPIRACY—BOYCOTT BY MEMBERS OF ASSOCIATION—COERCION—DAMAGES—*Boutwell et al. v. Marr et al.*, *Supreme Court of Vermont*, 42 *Atlantic Reporter*, page 607.—In this case James M. Boutwell and others, doing business in Barre as the Boutwell Polishing Company, sought to recover damages from Marr and others, members of the Granite Manufacturers' Association, for injury to the plaintiffs' business. Boutwell had purchased a granite-polishing mill which had been in operation for a number of years, and at the time of purchase was assured by the patrons that they would continue their custom. They did so for some months, the work of the mill averaging more than \$1,000 per month until November, when it fell to \$200, while no work was offered in December and January following. On the 10th of November the local association had indorsed a resolution of the Granite Manufacturers' Association of New England, with which it was connected, to the effect that "no trade shall be conducted with any individual, firm, or corporation engaging in cutting, quarrying, or polishing granite in the State of Vermont who are not members of this association." Violation of this rule involved a fine of \$50. Witnesses testified that they as members of the local association had voted for the adoption of the resolution, understanding that the effect would be to prevent any person in the association from doing business with anyone who declined to join it, and that the plaintiffs had been asked to join, but had declined, and that their refusal was the occasion of the loss of their business. It was also in evidence that defendants had said that the Boutwell company "would find that they couldn't do any polishing business until they joined the association," and that "the effect of the resolution was to destroy their business in one day but if they would join the association, they could get it back in one day."

On suit in the Washington County court both actual and exemplary damages were awarded, and on exceptions by the defendants the case came before the supreme court of the State, where the judgment was affirmed as to the actual and reversed as to the exemplary damages.

The following is taken from the remarks of Judge Munson, who delivered the opinion of the court:

There was clearly evidence tending to show that the defendants undertook to compel the plaintiffs to join the association by depriving their mill of work, and that they made use of their organization as a means of concerted action to accomplish their purpose. But there was no evidence tending to show that the defendants made any attempt to compel persons, not members of the association, to withhold their patronage, and they insist that they can not be made liable for simply withholding their own.

It is clear that everyone has a right to withdraw his own patronage when he pleases, but it is equally clear that he has no right to employ threats or intimidation to divert the patronage of another. If it be true as a general proposition that several may lawfully unite in doing to another's injury, even for the accomplishment of an unlawful pur-

pose, whatever each has a right to do individually, it by no means follows that the combination may not be so brought about as to make its united action an unlawful means. It may be true that if the defendants, acting independently of any organization, and moved solely by similarity of interest and views, had united in withdrawing their patronage, the effect upon the plaintiffs' business would have been the same, and yet the defendants have incurred no liability. But, in the case supposed, the united action would result from the free exercise of individual choice. It will be seen upon further inquiry that this can not be said of the action of an organization like that of the defendants. The withdrawal of patronage by concerted action, if legal in itself, becomes illegal when the concert of action is procured by coercion. In this case it could easily be found that a fine of \$50 for a violation of the rules was not intended to be applied to rules adopted to secure a performance of the ordinary duties of membership. If in fact designed to hold unwilling members to unity of action in any aggressive movement of unlawful character, the defendants can not complain if the law so treats it.

The fact that the members of the association voluntarily assumed its obligations in the first instance, so far as it is a fact, is not controlling. The law can not be compelled by any initial agreement of an associate member to treat him as one having no choice but that of the majority, nor as a willing participant in whatever action may be taken. The voluntary acceptance of by-laws providing for the imposition of coercive fines does not make them legal and collectible, and the standing threat of their imposition may properly be classed with the ordinary threat of suits upon groundless claims. It is clear that if the association had comprised but a small portion of the manufacturers, and had destroyed the plaintiffs' business by compelling the manufacturers to join them in withholding patronage, its members would have been liable. But it is claimed, in effect, that a business can be destroyed with impunity when the organization has become so extensive that there are no outside patrons to control, or so few that their course is a matter of no moment. Upon this theory, every successful instance of coercion would increase the safety with which another coercion could be attempted, and, when coercion had been pursued until but one contumacious person remained, immunity would be complete. It is clear that the law can not concede to organizations of this character the powers and immunities claimed for their association by these defendants, and retain its own power to protect the individual citizen in the free enjoyment of his capital or labor.

The case stands upon grounds which are inconsistent with the allowance of exemplary damages; for damages of this nature, if ever recoverable against several defendants, are recoverable only where all are shown to have been moved by a wanton desire to injure. Judgment for actual damages, with interest from date of judgment below.

LAWS OF VARIOUS STATES RELATING TO LABOR ENACTED SINCE JANUARY 1, 1896.

[The Second Special Report of the Department contains all laws of the various States and Territories and of the United States relating to labor in force January 1, 1896. Later enactments are reproduced in successive issues of the Bulletin from time to time as published.]

CONNECTICUT.

ACTS OF 1901.

CHAPTER 35.—*Discharged soldiers, etc.; employed in public buildings.*

SECTION 1. No honorably discharged soldier, sailor, or marine, having served as such in the Union army or navy during the war of the rebellion, holding a position by appointment or employment as janitor, engineer, or fireman in any public building owned by the State of Connecticut, or by the several counties thereof, shall be removed from such position or employment except for incompetency or misconduct shown, or have his compensation reduced except for cause shown, and after a hearing held upon due notice given to him of such hearing.

SEC. 5. This act shall take effect from its passage.

Approved April 19, 1901.

CHAPTER 68.—*Employment of laborers.*

SECTION 1. No contractor, foreman, superintendent, or supervisor of labor shall, while giving or contracting to furnish employment to any person or persons, exact or receive any pay, fee, reward, or voluntary contribution from such person or persons for furnishing such employment.

SEC. 2. Every person who shall violate any provision of the preceding section shall be fined not more than fifty dollars, or imprisoned not more than sixty days, or both.

SEC. 3. Every person and every agent of any firm or corporation who shall keep, maintain, or have the charge of any lodging house, shanty, tent, or other structure used or intended to be used as a boarding house, lodging place, or place of abode for the laborers employed by such person or agent, shall, within seventy-two hours after any such place shall have been occupied for such purpose or purposes, notify the local health officer of the town, city, or borough in which such place is situated, and request him to inspect the same. Such health officer shall, within a reasonable time thereafter, not exceeding five days, inspect such premises, and shall have power to order and direct such alterations or changes in the arrangements and details and provisions for the sanitation of such premises, or to forbid the use of the same altogether, as he shall under the circumstances judge will properly protect the health of the inmates.

SEC. 4. Every person or the agent of any firm or corporation who shall fail to comply with the provisions of this act, or shall refuse to comply with the orders of the health officer in relation thereto, shall be fined not more than one hundred dollars.

SEC. 5. Every person or agent of any corporation employing laborers, who also is engaged in selling such laborers any goods or merchandise, who shall charge or exact for the articles so sold a greater sum or amount than a reasonable price for such articles in the town or city where said sales are made, shall be fined not more than twenty-five dollars for each sale of each separate article so made as aforesaid.

Approved May 17, 1901.

CHAPTER 83.—*Inspection, etc., of bakeries.*

SECTION 1. All buildings or rooms occupied as biscuit, bread, or cake bakeries shall be drained and plumbed in a manner conducive to the proper healthful and sanitary condition thereof, and constructed with air shafts and windows or ventilating pipes, sufficient to insure ventilation, as the inspector of factories shall direct; and no cellar or basement, not now used as a bakery, shall hereafter be used and occupied as a bakery, and a cellar heretofore occupied as a bakery shall, when once closed, not be reopened for use as a bakery.

SEC. 2. Every such bakery shall be provided with a proper wash room and water-closet or closets, apart from the bake room or rooms where the manufacturing of such food products is conducted; and no water-closet, earth-closet, privy, or ash pit shall be within or communicate directly with a bake shop.

SEC. 3. Every room used for the manufacture of flour or meal food shall be at least eight feet in height; the side walls of such rooms shall be plastered or wainscoted, the ceiling plastered or ceiled with lumber or metal, and, if required by the inspector of factories, shall be whitewashed at least once in three months; the furniture and utensils of such room shall be so arranged as to be easily moved in order that the furniture and floor may at all times be kept in proper healthful sanitary condition.

SEC. 4. The manufactured flour or meal food products shall be kept in perfectly dry and airy rooms, so arranged that the floors, shelves, and all other facilities for storing the same can be easily and perfectly cleaned.

SEC. 5. The sleeping places for persons employed in a bakery shall be kept separate from the room or rooms where flour or meal food products are manufactured or stored.

SEC. 6. After an inspection of a bakery has been made by the inspector of factories and it is found to conform to the provisions of this act, said inspector may issue a certificate to the owner or operator of such bakery, that it is conducted in compliance with all the provisions of this act; but where orders are issued by said inspector to improve the condition of a bakery, no such certificate shall be issued until such order and the provisions of this act shall have been complied with.

SEC. 7. The owner, agent, or lessee of any property affected by the provisions of this act, shall, within thirty days after the service of notice upon him of an order issued by the inspector of factories requiring any alterations to be made in or upon such premises, comply therewith, or cease to use or allow the use of such premises as a bake shop; such notice shall be in writing and may be served upon such owner, agent, or lessee, either personally or by mail, and a notice by registered letter, postage prepaid, mailed to the last known address of such owner, agent, or lessee shall be deemed sufficient for the purposes of this act.

SEC. 8. Any person who violates the provisions of this act or refuses to comply with any requirement of the inspector of factories, as provided herein, shall be guilty of a misdemeanor, and on conviction thereof before any court of competent jurisdiction, shall be fined not less than twenty nor more than fifty dollars for the first offense; shall be fined not less than fifty nor more than one hundred dollars or imprisoned not more than ten days for the second offense; and shall be fined not less than two hundred dollars and imprisoned not more than thirty days for the third offense.

SEC. 9. No employer shall require, permit, or suffer any person to work in his bake shop who is affected with pulmonary tuberculosis, or with scrofulous diseases, or with any venereal diseases, or with any communicable skin affection, and every employer is hereby required to maintain himself and his employees in a clean and sanitary condition while engaged in the manufacture, handling, or sale of such food products.

SEC. 10. Chapter CLXXIV of the public acts of 1897 and chapter 140 of the public acts of 1899 are hereby repealed.

Approved May 29, 1901.

CHAPTER 97.—*Factory inspection—Colored glass windows.*

SECTION 1. Any firm or corporation using stained, painted, or corrugated glass in factory windows, where the same is injurious to the eyes of the workmen therein, shall remove the same upon the order of the inspector of factories.

Approved May 29, 1901.

CHAPTER 100.—*Employment bureaus.*

SECTION 1. The commissioner of the bureau of labor statistics shall organize and establish in each of the cities of New Haven, Hartford, Bridgeport, Norwich, and Waterbury a free public employment bureau, for the purpose of receiving applications of persons seeking employment and applications of persons seeking to employ

labor. No compensation or fee shall be charged or received, directly or indirectly, from persons applying for employment or help through any such bureau. Such commissioner shall appoint for each bureau so organized, and may remove for good and sufficient cause, a superintendent for the proper administration of the affairs thereof. The salaries of such superintendents shall be fixed by the commissioner. Such salaries together with the expenses of such bureaus shall be paid in the same manner as other expenses of the bureau of labor statistics, and shall not exceed the sum of two thousand dollars per annum for each office operated.

SEC. 3. No person shall open, keep, or carry on any such [i. e. where fees are charged] employment agency in this State, unless such person shall procure a license from the commissioner of the bureau of labor statistics authorizing the licensee to open, keep, or carry on such agency at a designated place, which license shall be issued by the said commissioner upon the payment to him of a fee of ten dollars for the first year and five dollars for each succeeding year for each and every employment agency in the State. Every license shall contain a designation of the city, street, and the number of the house in which the person licensed shall carry on the said employment agency, and the number and date of such license. No person shall conduct an employment agency or act as agent for procuring work or employment in any building where liquor is sold or offered for sale.

SEC. 4. The commissioner of the bureau of labor statistics shall require such person to file with his application for a license a bond in due form to the State of Connecticut in the penal sum of five hundred dollars, with one or more sureties to be approved by the said commissioner, and conditioned that the obligor may not violate any of the duties, terms, conditions, provisions, or requirements of this act. The said commissioner is authorized to cause an action or actions to be brought on said bond in the name of the State of Connecticut for any violation of any of its conditions; and he may also revoke any license whenever, in his judgment, the person licensed shall violate any of the provisions of this act.

SEC. 5. It shall be the duty of every person so licensed to keep a register in which shall be entered, in the English language, the name and address of every applicant. Such licensed person shall also enter in a register the name and address of every person who shall make application for help or servants, and the name and nature of the employment for which such help shall be wanted. Such registers shall at all reasonable hours be open to the inspection and examination of the commissioner of the bureau of labor statistics or his agents.

SEC. 6. It shall be the duty of every such licensed person to give to each and every applicant for employment or work from whom a fee or other valuable thing shall be received for procuring such employment, which fee or valuable thing shall in no case exceed the value of two dollars, a receipt in which shall be stated the name of the applicant, the amount of the fee or other valuable thing, the date, the name or nature of the employment or situation to be procured, and a separate receipt in which shall be stated the name and address of the person or persons to whom the applicant shall be referred or sent for employment or work. In case the said applicant shall not obtain or accept a situation or employment through or by the procurement or agency of such licensed person within one month after registration as aforesaid, then said licensed person shall forthwith repay and return to such applicant upon demand being made therefor the full amount of the fee or valuable thing paid or delivered by said applicant to said licensed person, provided that such demand be made within thirty days after the expiration of the period aforesaid. Every receipt aforesaid shall have printed on the back thereof, in the English language, a copy of this section, and every such licensed person shall cause a plain and legible printed copy of this act to be posted in a conspicuous place in such agency or place of business. No such licensed person shall print, paint, publish, or display on any sign, window, or in any publication the name of the State of Connecticut Free Public Employment Bureau or a name similar thereto.

SEC. 7. No such licensed person shall send or cause to be sent any female help or servants to any place of bad repute, house of ill-fame, or assignation house, or to any house or place of amusement kept for immoral purposes. No such licensed person shall publish or cause to be published any false or fraudulent notice or advertisement, or give any false information, or make any false promise concerning or relating to work or employment to any one who shall register for employment; and no such licensed person shall make any false entries in the register to be kept by him as herein provided.

SEC. 8. It shall be the duty of the commissioner of the bureau of labor statistics to look after the enforcement of this act. If he shall have reason to believe that any of its provisions are disregarded or violated he shall report to the proper prosecuting officer the facts relating to the violating thereof, whereupon it shall be the duty of such officer to bring and carry on a proper criminal prosecution for such

violation. Any person convicted of a violation of this act or of any part thereof, shall be guilty of a misdemeanor, and shall be fined not more than one hundred dollars for each offense.

SEC. 9. Any and all money or moneys received by the commissioner of the bureau of labor statistics under or by the provisions of this act shall be paid by said commissioner to the treasurer.

SEC. 10. This act shall take effect from and after July 1, 1901.

Approved May 29, 1901.

CHAPTER 110.—*Employment of children—Certificate of age.*

SECTION 1. Every person or corporation employing a child under sixteen years of age in any mechanical, mercantile, or manufacturing establishment shall obtain a certificate showing that the child is over fourteen years of age.

SEC. 2. Any employer or other person having control of any establishment or premises where children under sixteen years of age are employed, who shall refuse or neglect to have and keep on file the certificates described in the preceding section or to show the same, with the list of the names of such children so employed, to the secretary or any agent of the State board of education, or any agent of the board of school visitors, school committee, or board of education, as the case may be, of the town in which the establishment or premises are located, when demanded during the usual business hours, shall be fined not more than one hundred dollars.

SEC. 4. Section 1754 of the general statutes, as amended by section two of chapter CXVIII of the public acts of 1895, is hereby amended to read as follows: Any person acting for himself, or as agent in any way whatever of any mechanical, mercantile, or manufacturing establishment, who shall employ or authorize or permit to be employed in such establishment any child, in violation of the preceding section, shall be fined not more than sixty dollars, and every week of such illegal employment shall be a distinct offense: *Provided*, That no person shall be punished under this section for the employment of any child, when, at the time of such employment, the employer shall obtain and thereafter, during such employment, keep on file the certificate of any registrar of births, marriages, and deaths, or town clerk, or of the teacher of the school where such child last attended, stating that such child is over fourteen years of age.

SEC. 5. Section 2107 of the general statutes is hereby amended to read as follows: Any parent or other person, having control of a child, who shall make any false statement concerning the age of such child with intent to deceive the town clerk or registrar of births, marriages, and deaths of any town, or the teacher of any school, or shall instruct any child to make any such false statement, shall be fined not more than twenty dollars.

SEC. 6. Section 2106 of the general statutes is hereby repealed.

Approved June 3, 1901.

CHAPTER 132.—*Examination, licensing, etc., of barbers.*

SECTION 1. It shall be unlawful for any person to follow the occupation of barber in this State unless he shall have first obtained a certificate of registration as provided in this act: *Provided, however*, That nothing contained in this act shall apply to or affect any person who shall be actually engaged in such occupation at the time of the approval of this act, except as hereinafter provided.

SEC. 2. To carry out the provisions of this act, the governor shall appoint, on or before the first day of July, 1901, and biennially thereafter, a board of three examiners who shall have been citizens of this State for at least three years prior to their appointment and been engaged in the occupation of a barber at least five years prior to their appointment, and who shall hold their offices for two years from the first day of July in the year of their respective appointments and until their successors shall have been appointed and qualified. Each member of said board, before entering upon the duties of his office, shall give a bond in the sum of one thousand dollars, with sureties to be approved by the secretary of the state, conditioned for the faithful performance of his duties, and shall take the oath provided by law for public officers.

SEC. 3. Said board shall elect a president, secretary, and treasurer, shall have a common seal, and shall have power to administer oaths. The treasurer shall give an additional bond of two thousand dollars, with sureties, to be approved by the secretary of the state, conditioned that he will pay over to the State treasurer all money in his hands in excess of five hundred dollars, as hereinafter provided. The office of secretary and treasurer may be filled by the same person, as said board may determine.

SEC. 4. Each member of said board shall receive a compensation of five dollars per day for actual service, and three cents per mile for each mile actually traveled in attending the meetings of the board, which compensation shall be paid out of any moneys in the hands of the treasurer of said board: *Provided*, That the said compensation and mileage shall in no event be paid out of the State treasury.

SEC. 5. Said board shall report annually to the governor a full statement of the receipts and disbursements of the board during the preceding year, and a full statement of its doings and proceedings, and make such recommendations as to it may seem proper, looking to the better carrying out of the intents and purposes of this act. Any moneys in the hands of the treasurer of said board at the time of making such report, in excess of five hundred dollars, shall be paid over to the State treasurer to be kept by him for the future maintenance of the board and to be disbursed by him upon warrants signed by the president and treasurer of said board.

SEC. 6. Said board shall hold public examinations at least four times in each year in at least four different cities in this State, at such times and places as it may determine, notice of such meetings to be given by a publication thereof at least ten days before such meetings in a daily newspaper in Hartford and in the county where such meeting is to be held.

SEC. 7. Every person now engaged in the occupation of barber in this State, shall, within ninety days after the approval of this act, file with the secretary of said board an affidavit setting forth his name, residence, and the length of time during which and the place where he has practiced such occupation, and shall pay to the treasurer of said board one dollar, and a certificate of registration entitling him to practice said occupation shall thereupon be issued to him.

SEC. 8. Any other person desiring to obtain a certificate of registration under this act shall make application to said board therefor, and shall pay to the treasurer of said board an examination fee of five dollars, and shall present himself at the next regular meeting of the board for the examination of applicants, whereupon said board shall proceed to examine such person, and being satisfied that he is above the age of nineteen years, of good moral character, free from contagious diseases, has either studied the trade for three years as an apprentice under a qualified and practicing barber, or studied the trade for at least three years in a properly appointed and conducted barber school under the instructions of a competent barber, or practiced the trade for at least three years in this or other States, and is possessed of the requisite skill in said trade properly to perform all the duties thereof, including his ability in the preparation of the tools, in shaving, hair cutting, and all the duties and services incident thereto, and is possessed of sufficient knowledge concerning the common diseases of the face and skin to avoid the aggravation and spreading thereof in the practice of said trade in this State, shall thereupon issue to such person a certificate entitling him to practice the occupation of a barber in this State. All persons making application under the provisions of this act shall be allowed to practice the occupation of a barber until the next regular meeting of said board.

SEC. 9. Nothing in this act shall prohibit any person from serving as an apprentice in said trade under a barber authorized to practice the same under this act, nor from serving as a student in any school for the teaching of such trade under the instruction of a qualified barber.

SEC. 10. Said board shall furnish to each person to whom a certificate of registration is issued a card or insignia bearing the seal of the board and the signature of its president and secretary, certifying that the holder thereof is entitled to practice the occupation of barber in this State, and it shall be the duty of the holder of such card or insignia to post the same in [a] conspicuous place in front of his working chair, where it may readily be seen by all persons whom he may serve.

SEC. 11. Said board shall keep a register in which shall be entered the names of all persons to whom certificates are issued under this act, and said register shall be at all times open to public inspection.

SEC. 12. Said board shall have power to revoke any certificate of registration granted by it under this act, for gross incompetency, or for having or imparting any contagious or infectious disease in said trade: *Provided*, That before any certificate shall be so revoked the holder thereof shall have notice in writing of the charge or charges against him, and shall, at a day specified in said notice, at least five days after the service thereof, be given a public hearing and full opportunity to produce testimony in his behalf and to confront the witnesses against him. Any person whose certificate has been so revoked may, after the expiration of ninety days, apply to have the same regranted, and the same shall be regranted to him upon a satisfactory showing that the disqualification has ceased.

SEC. 13. To shave and trim the beard or cut the hair of any person for hire or reward received by the person performing such service, or any other person, shall be construed as practicing the occupation of barber within the meaning of this act.

SEC. 14. Any person practicing the occupation of barber without having obtained a certificate of registration as provided by this act, or willfully employing a barber who has not such a certificate, or falsely pretending to be qualified to practice such occupation under this act, or violating any of the provisions of this act, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than one hundred dollars.

SEC. 15. This act shall take effect from its passage.

Approved June 11, 1901.

CHAPTER 155.—*Liability of employers for injuries to employees.*

SECTION 1. It shall be the duty of the master to exercise reasonable care to provide for his servant a reasonably safe place in which to work, reasonably safe appliances and instrumentalities for his work, and fit and competent persons as his collaborators.

SEC. 2. It shall be the duty of the master to exercise reasonable care, in the appointment or designation of a vice-principal, to appoint as such vice-principal a fit and competent person.

SEC. 3. The default of a vice-principal in the performance of any duty imposed by law upon the master shall be the default of the master.

SEC. 4. This act shall take effect from its passage.

Approved June 17, 1901.

MASSACHUSETTS.

ACTS OF 1901.

CHAPTER 80.—*Sunday labor—Bootblacks.*

SECTION 1. It shall be lawful (*a*) for bootblacks to carry on their business on Sunday up to the hour of eleven in the forenoon.

SEC. 2. This act shall take effect upon its passage.

Approved February 21, 1901.

a In printing this act in Bulletin No. 38, the issue of January, 1902, page 185, this word erroneously appeared as *unlawful*.
